1 Important Safety Information

Safe operation of Dometic marine steering systems depend on proper installation and maintenance of the system(s), as well as the operator's safe judgment, boating knowledge, and expertise.

The installer and operator must read and understand the safety requirements in this section along with any other manual(s) supplied before installing or using these steering systems. If you have any questions about safe installation or operation of these systems, contact Dometic Marine. Please don't guess.

1.1 Explanation of symbols

The symbols below are used throughout this publication to alert you to potential hazards involved with the operation and installation of this product. Observe these warnings and notices carefully. The safety alerts alone cannot eliminate hazards; strict compliance with any special instructions during installation, operation, and maintenance, along with common sense operation, are important measures to prevent hazardous situations.

DANGER!

Safety instruction: Indicates a hazardous situation that, if not avoided, will result in death or serious injury.

WARNING!

Safety instruction: Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

CAUTION!

Safety instruction: Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury.

NOTICE!

Indicates a situation that, if not avoided, can result in property damage.

NOTE

Supplementary information for operating the product.

1.2 Safe operation

WARNING!

The safety information below is intended to inform you of hazards that may be present when operating a boat equipped with Dometic controls. Read and understand this information.

General

- Read and understand this manual and any other documentation provided with your steering system.
- Know and obey all applicable federal, state, and municipal laws and regulations that govern boating in your area. Dometic recommends all boat operators take a boating safety course.
- Never operate a boat while under the influence of drugs or alcohol.

Before every use

- Perform the pre-trip inspection(s) described in your operator's manual.

WARNING!

Do not operate the boat if any component is not in proper working order. It may result in a loss of steering control, which could lead to a collision and/or ejection from the boat, causing property damage, personal injury, and/or death.

During use

- Wear a Coast Guard-approved personal flotation device (PFD).
- Attach the engine shut-off lanyard to your PFD.
- Do not allow anyone not familiar with the controls (steering, shift/throttle etc.) to operate the boat.

After use

- Rinse the steering cylinders thoroughly, using only fresh, clean water.
- Do not use acetone, or cleaners containing ammonia, acids, or any other corrosive ingredients, on any steering components.
- Some products formulated for cleaning fiberglass hulls are known to aggressively corrode stainless steel shafts. If using a hull cleaner, avoid overspray on the cylinders. Rinse off any overspray immediately with fresh, clean water.

1.3 Safety considerations for installers

CAUTION!

We recommend that the installation of any Dometic steering component(s) is performed by a certified marine technician.

Before installation

- Read this selection guide and understand any other manual(s) supplied with the system.
- Ensure you have all the required components on hand before you start.
- Do not use a wheel-mounted trim switch with coiled cord. The cord can wrap around the steering wheel shaft and inhibit steering.

During installation

- Install components as instructed in the installation manual. Some component parts and kits may contain additional installation instructions – refer also to those instructions.
- Do not substitute any component of the system without written authorization from Dometic. Dometic parts are rigorously engineered and tested to ensure system integrity. Substitution of components may compromise safety, performance, and reliability.
- All steering components, inc. cylinder must be compatible with, and rated for, the engine(s) installed on the boat.
- If an instruction is unclear, contradictory, or you are otherwise unsure how to proceed, do not guess. Contact Dometic Marine technical support at Tel: 604.248.3858 or email: seastar@dometic.com.

After installation

- Perform the system inspection checks described in the installation manual.
- Correct any interference issues before handing the boat to the owner.

WARNING!

Failure to comply with Dometic instructions may result in loss of steering control, which could lead to a collision and/or ejection from the boat, causing property damage, personal injury, and/or death.

2 Dometic Marine Steering

2.1 Hydraulic steering overview

Our manual hydraulic steering systems are simple and efficient. The basic system consists of four main components;

1) the helm pump, 2) the cylinder, 3) the hose or tubing required to connect the cylinder to the helm pump, and 4) genuine SeaStar steering fluid.

These basic components are necessary in all applications. However, as the system variables increase (i.e.: multiple engines, rudders, steering stations, power assist and autopilots), additional components may be required.

Figure 2-1.

1. The helm unit

The helm pump is an axial piston pump specifically designed for manual steering, it has a built-in lock valve to prevent the steering load from feeding back to the driver. The lock valve will not allow the rudder or drive unit to move until you move it with the steering wheel. The lock valve section of the helm also includes a relief valve. This relief valve provides over-pressure protection for mechanical components, hydraulic hoses and fittings.

2. The cylinder

The most important differences between the variety of steering systems available is the cylinder selection. Both BayStar and SeaStar systems have a cylinder for most steering applications.

3. Hoses and tubes — important

Required to provide a path for the fluid to flow under pressure from the helm pump to the cylinder.

SeaStar hoses are a custom multi-layered composite design, engineered specifically for our systems. They are designed to exceed SAE and ABYC specifications and provide precise steering control not achievable with hydraulic industry standard hoses. Due to performance and safety concerns, SeaStar recommends that only SeaStar or SeaStar PRO hoses be used in SeaStar steering systems.

4. Steering fluid — important

Due to the precision operation of our steering systems, Dometic recommends use of SeaStar steering fluid only in our hydraulic steering systems. SeaStar steering systems have been engineered and validated using our proprietary SeaStar hydraulic steering fluid. SeaStar steering fluid is blended with a special additive package that contains anti-foaming and anti-rust agents, anti-oxidants, viscosity stabilizers, corrosion inhibitors, wear additives as well as water emulsification adders that were formulated not to harm or degrade our components. It is highly recommended that SeaStar steering fluid be used to ensure optimum system performance and safety.

The system: How it works

The system is a two-line system. This makes operation very simple.

1. The steering wheel, which is attached to the helm pump, is rotated in the desired direction (ie: a turn to starboard or clockwise rotation).
2. Steering fluid is pumped out the corresponding port from the rear of the helm into the starboard line and then into the cylinder.

Figure 2-2.

3. This causes the cylinder rod, which is attached to the vessels rudder or drive unit, to move (ie: rod moves to port) thus causing the vessel to alter course.
4. Fluid displaced from the opposite end (ie: the port end) of the cylinder flows (ie: into the port line) back to the helm pump.
5. For steering in the opposite direction, simply turn the helm the other way.
6. When no course corrections are required, the integral No-Feed-Back design holds the rudder or drive unit stationary.

2.1.1 **SeaStar/BayStar hydraulic steering**

The BayStar Hydraulic Steering System is designed to add safety, reliability and comfort to single outboard powered boats to a maximum 150HP. The SeaStar hydraulic steering system is designed to provide that extra margin of muscle when needed (up to a maximum of 350HP). The SeaStar system conveniently handles outboards, sterndrive and inboard boats.

System selection, installation and service is substantially simplified with just four major components — helm, cylinder, hose/tube and genuine SeaStar steering fluid. SeaStar has a comprehensive range of cylinders to conveniently handle the variety of outboard, sterndrive and inboard steering applications. These are suitable for both pleasure and commercial applications. Extra steering stations and/or autopilots are easily added.

SeaStar hydraulic steering is a total commitment to quality, performance and simplicity.

BayStar and SeaStar, the hydraulic steering systems are;

Easy to install...

- Only four essential components; helm, cylinder, tube/hose and SeaStar steering fluid
- Compact and attractive helm design
- Variety of helm mounting configurations
- Simple tube/hose fitting connections
- Clear, complete installation instructions

Easy to fill and purge...

- Engineered bleed fittings on the cylinders
- A helm and lock valve design that enhances air removal
- A no-mess filler device
- A filling and purging time of normally less than 30 minutes
- Easy to check for proper installation
- Easy purging check via filler device
- No searching for difficult-to-find air leaks

Easy to turn...

- Anti-friction piston points

Designed to provide many years of service...

- Precision built
- No corrosive materials exposed to marine environment
- Field replaceable helm and cylinder shaft seals
- A no-hassle warranty — 2 years for pleasure use
— 1 year for commercial use (SeaStar)

BayStar and SeaStar... *Simply the best!*

Selecting the system

The objective is to match the steering system to the requirements of the vessel. This depends on four things;

1. hull type (ie: planing or displacement),
2. type of propulsion system in the vessel (ie: inboard, outboard, sterndrive, etc.),
3. the number of engines or rudders, and
4. the total power of the engines (ie: Horsepower).

Once the system and cylinder has been selected, the size of the helm pump must be determined. SeaStar systems also allow the following options to be specified;

1. the number of steering stations,
2. helm configuration (ie: standard or tilt helm),
3. additional features such as autopilots, and
4. power assist.

NOTE: Steering response versus steering effort

Steering wheel effort is directly proportional to the number of wheel turns lock to lock.

The number of wheel turns lock to lock is dependent on three things;

1. the volume of the cylinder,
2. the displacement of the helm pump,
3. the allowable movement of the rudder or drive unit.

Less wheel turns lock to lock results in more steering effort. Conversely, more wheel turns lock to lock results in less steering effort. However, additional factors that can influence steering effort are;

1. vessel speed,
2. rudder size,
3. unusual propeller selections,
4. hull type (ie: displacement, planing, etc.),
5. improperly aligned counter balance skeg, torque tab
6. trim/position, and
7. propeller height relative to water.

WARNING!

Recommendations made in this selection guide are based on our experience with typical installations, applications and usage. Do not use products in applications that they were not intended for. It is the boat manufacturer and the installer's responsibility to ensure the components selected are sufficiently validated on the boat application for safe and acceptable operation.

**NOTE: www.SeaStarBOM.com**

The www.SeaStarBOM.com utility can be used to help select a system.

Typical boat designs that use BayStar/SeaStar steering systems**1. Inflatable**

Boats manufactured from waterproofed fabric which are inflated with air in order to achieve their shape. The bottom of the hull may be made of fabric and/or fiberglass. They typically have narrow transoms. Boats may be single and/or dual engine, and is generally slower than 40 mph.

2. Cruiser

Cuddy/express/bridge cruiser primarily designed for cruising. It has overnight accommodations. Typically rigged with two steering stations. Boats may be single and/or dual engine, and is generally slower than 45 mph.

3. Runabout

Intended for day boating. Typically a single engine, but, can be a dual engine boat. This includes tournament Ski boats and performance outboards. Boat speeds are generally slower than 60 mph.

4. Fish "N" Ski

Single engine boat designed for day fishing or skiing in protected waters. Boat speeds are generally slower than 40 mph.

5. Fish Boat

Boat primarily designed and equipped for offshore fishing. May be rigged with a second station and may have single and/or dual outboards. Speeds are generally slower than 50 mph.

6. Center Console

Boats with the control station located on the center line of the boat. Designed specifically for fishing, may be single and/or dual engine(s). Boat speeds are generally slower than 65 mph.

7. Bass Boat

Single engine designed specifically for fishing in protected waters and has a flat bottomed hull. Generally performance orientated and speeds in excess of 60 mph.

8. Pontoon

Twin or triple hull boats. Single and dual engine capable. Generally speeds to not exceed 60 mph. Note: High steering loads when equipped with engines over 115 HP.

9. Catamaran

Twin hull vessels. Typically twin engine boats where the use of a mechanical tie bar is not possible. Speeds to not exceed 60 mph.

10. Commercial/Work/Rescue/Race

Any of the above noted boats but used in a more severe environment. Take special care when selecting a system for these boats to ensure that you have both comfortable and safe steering.

2.1.2 Optimum performance chart for outboard engines

How can we help?

When researching a hydraulic steering system for your boat there are several systems to choose from. The chart noted below will assist with selecting the correct system for your outboard powered boat. It is recommended that boats with high steering loads (pontoons, bass boats and larger HP four stroke engines) use the SeaStar/SeaStar PRO steering. Doing so will reduce the steering effort due to the fact that the SeaStar steering systems provide more output power, resulting in lower steering effort. If you are unsure of what system to choose, consult with your marine dealer, or Dometic technical support.

Figure 2-3.

Chart based on 'optimum comfort'

* Ideal for single engine, high speed boats, such as bass boats.

** High performance 150HP engines, such as Mercury Optimax should use SeaStar.

2.2 Electric/electronic steering overview

2.2.1 The technology behind the system

The incredible feel you get when you're behind the wheel of a boat equipped with Optimus EPS is the result of an innovative array of technology and engineering. Each component has been designed to complement the other, resulting in a seamless experience of steering control in virtually every situation on the water. The high level of engineering also extends to the reliability of the system, with quality materials, careful manufacturing and redundant systems, all to stand up to the rigors of life on the water.

2.2.2 System components

Electronic helm — key benefits

- Adjustable steering for maximum comfort
- Driver comfort, control and performance as speed varies
- Provides redundancy for reliable operation
- No hydraulic oil at helm
- Adjustable position of steering wheel for personal comfort

SmartCylinder — key benefits

- System reliability and operation
- No additional RFU required for autopilot system
- Fits most outboard and inboard applications

Hydraulic Steering Pump — key benefits

- Significantly reduces overall power consumption
- No oil cooler required for hydraulic fluid
- Allows user to purge system with existing components
- Meets Coast Guard requirement for ignition protection
- A separate autopilot pump is not required
- Limp home mode on remaining functional engine(s)

Pump Control Module (PCM) — key benefits

- Ensures system reliability and operation
- Ensures reliable cable protection from vibration
- No additional autopilot pump and RFU
- Ensures system operates at peak performance

CANtrak Display — key benefits

- Interface to setup steering and joystick system
- Installer adjustable steering settings
- Real-time system status rudder direction and RPM
- No additional device or computer required to get the system functional
- Interface to activate both SeaStation and SeaWays

NOTE: www.OptimusBOM.com

The www.OptimusBOM.com utility can be used to help select a system.

2.2.2 Applications for Optimus EPS

Outboard applications

All single, twin, triple and quad outboard engine boats

- Electronic and mechanical controlled
- Single and multi-helm station boats
- Performance powerboats, bay boats, center console, saltwater fishing vessels, RIBS, catamarans, houseboats and pontoon boats

Inboard applications (40-100'+)

Most single and twin inboard engine boats — electronic and mechanical controlled

- Single, twin and triple helm station yachts
- Performance motor yachts, express convertibles, and sport yachts

Inboard & sterndrive applications (under 40')

Most single and twin inboard engine boats — electronic and mechanical controlled

- Single, twin and triple helm station yachts
- Competition ski boats, cruisers, and sport fishing yachts

Optimus 360 not compatible with Mercury Next Gen control system

N/A — Currently not available

MST — Mechanical Shift and Throttle Engines

EST — Electronic Shift and Throttle Engines

JS Upgrade — Can add joystick control to an existing Optimus EPS vessel

2.2.5 Advantages of Optimus EPS

- No oil at helm
- Boat that steers like a sports car
- Plug and play autopilot compatibility with drive by wire systems
- No autopilot pump or rudder feedback unit
- Adjustable speed sensitive wheel effort
- Adjustable speed sensitive turns lock to lock
- Can be retrofitted to existing mechanical controlled engines
- No tie-bars (twin configuration)
- No liquid tie-bar (CAT)
- On demand pumps which extend battery life
- Components based on existing Dometic reliability and quality
- NMEA 2000 Certified. Meets or exceeds NMMA, ABYC, CE, ISO, and SAE electrical & environmental requirements

Options for Optimus EPS

- Multi-station electronic helm
- Heavy-duty Tournament cylinders
- Triple with tie-bar
- Quad with tie-bars

Specifications

Features & Benefits of the Optimus EPS System

- Optimus EPS is designed to be Optimus 360 ready
- ABYC, CE, ISO and SAE compliant — adheres to established safety standards
- Compatible with select autopilot models from Simrad, Garmin, and Raymarine
- When adding 2nd or 3rd station helm, no oil, just electrical connection

Autopilot interface

The Optimus EPS electronic control system interfaces directly with the latest generation of autopilots from Garmin, Raymarine and Simrad, without the need for a second pump and the lengthy installation and purging procedure.

Redundancy

Optimus EPS has multiple levels of redundancy using a fault tolerant CAN network, and each component has at least 2 continually monitored sensors.

Ackerman steering

Intelligent programming allows the Optimus EPS system to separately control the steering angle of inner and outer outboards. This eliminates under-steer caused by the outside outboard “pushing” against the curve of the turn. Ackerman steering is especially important in power catamarans where the engines are located farther apart.

Active sensitivity

Lock-to-lock turns and wheel effort are programmed to change with engine RPM. At slow speeds, Optimus EPS can be set to reduce the number of turns lock-to-lock, and make it easier to steer. When you’re negotiating through traffic or in a tight spot, those smaller moves of the wheel give you precise control. When you’re running at speed in open water, Optimus EPS can be set to increase lock-to-lock turns, for example, and increase steering effort giving the driver more stability to comfortably keep on course. And through it all, Optimus EPS does the work, so you can relax and take it easy.

3 Hydraulic Outboard Steering

3.1 BayStar front mount series

BayStar™ hydraulic steering is brought to you by Dometic, the manufacturer of SeaStar®, the most trusted name in pleasure boat steering. BayStar allows you to install all of the safety, reliability and comfort of hydraulic steering onto your single engine vessel with a Coast Guard approved transom/HP rating up to MAX 150 HP. Combine this with the superior design team, rigid ISO quality control and teamed with the finest materials and precision manufacturing, BayStar continues the tradition bringing comfort and safety to boating.

The BayStar steering system consists of a super low friction helm for smooth comfortable steering, a balanced cylinder—featuring a compact design that fits most splashwells. The systems are easy to install with “cut-to-length” tubing. Available in complete kits or by individual components. For detailed application information go to www.dometic.com

Helm pumps and cylinders are fitted with positionable O-Ring fittings (ORB).

Figure 3-1.

NOTICE!

BayStar steering systems are not recommended for vessels with high steering loads. Some examples of vessels with high steering loads include Pontoon boats, Bass boats and vessels using high performance engines or 4-3/4" hub props. Customers should then consider upgrading to SeaStar/SeaStar PRO steering. This will reduce the steering effort due to the fact that SeaStar provides more output resulting in lower steering effort.

NOTICE!

Tilt helms HH4315-3 and HH4316-3 are available separately. Currently not available in kit form.

3.1.1 Typical BayStar installation

Figure 3-2.

CAUTION!

-3 helm pumps are fitted with positionable O-ring style hose fitting ports (commonly referred to as ORB). Do not attempt to install an NPT pipe fitting into a -3 helm hose fitting port. Doing so will lead to irreparable damage to the helm. Only use SeaStar O-ring style hose fittings (ORB).

3.1.2 Three easy steps to select your BayStar system

- 1. Check helm dimension.** Both the Standard and Tilt helms require a 3" (76mm) cut-out hole in the dash.

Standard helm part # HH4311-3 and HH4314-3

Seal kit = **HP6032**

HH4311-3 (1.1 cu.in.) Gives 6.5 wheel turns lock to lock.

HH4314-3 (1.4 cu.in.) Gives 5.2 wheel turns lock to lock. When using BayStar outboard cylinders.

Figure 3-3. Standard helm part # HH4311-3 and HH4314-3.

Sport tilt helm part # HH4315-3

Seal kit = **HP6032**
Tilt mechanism kit = **HA6123**

HH4315-3 (1.4 cu.in.) Gives 5.2 wheel turns lock to lock. When using BayStar outboard cylinders.

Figure 3-4. Sport tilt helm part # HH4315-3.

Sport Plus tilt helm part # HH4316-3

Seal kit = **HP6032**
Tilt mechanism kit = **HA6423**

HH4316-3 (1.4 cu.in.) Gives 5.2 wheel turns lock to lock.

Figure 3-5. Sport Plus tilt helm part # HH4316-3.

2. Is the Splashwell wide enough?

The HC4645-3 / 47-3 / 48-3 / 58-3 require a minimum 21" (534 mm) Splashwell width.

NPT seal kit = **HP4600**
ORB seal kit = **HP4601**
Tee/bleeder kit = **HF4202**
Support rod/nut/clip = **HP6050**
Pivot plate see page 3-6

Figure 3-6. BayStar cylinder part # HC4645-3 / 47-3 / 58-3.

3. Is there enough room in the splashwell for full engine tilt?

Find the dimensions (B & C) of your splashwell. Check them against the minimum splashwell dimensions for full engine tilt for your engine and cylinder.

Motor well dimensions required for BayStar front mount outboard steering systems

Cylinder model No.	# of engines	A	B	C	Min. engine center distance
HC4645-3 / 47-3 / 48-3 / 58-3	1	21" (534 mm)	6" (153 mm)	5" (127 mm)	N/A
	2	Twin engine applications not available			

NOTES:

- a) Ensure there is no interference between the BayStar cylinder rod and the splashwell boot or engine controls and cables.
- b) Dimensional restrictions also apply to external motor mount brackets.
- c) Ensure dimension 'A' maintained through full trim/tilt range.
- d) Maximum transom thickness 3" (76 mm).
- e) **Engines less than 70HP may require up to an additional 1" (25 mm) of splashwell clearance.**

Figure 3-7.

3.1.3 BayStar steering kits

BayStar Steering kits come complete with everything needed for an install, (some engines require additional kits and/or cylinder plate change, see application chart on page 3-6) the cylinder does not require the engine manufacturer drag link for connection. For your convenience two lengths of 20' cut to fit tubing are supplied with the HK4200A-3 and two lengths of 30' cut to fit tubing are supplied with the HK4230A-3 kit.

NOTICE!

HC4645-3 compact cylinder is included in both BayStar steering kits. If your engine requires the use of a cylinder other than HC4645-3 or HC4658-3 (refer to application guide on page 3-6) then purchase of a replacement pivot plate (noted on page 3-6) will be required.

Figure 3-8.

BayStar steering kit — HK4200A-3

Includes: BayStar helm, cylinder (HC4645-3), two 20' tube assemblies, and fluid.

BayStar steering kit — HK4230A-3

Includes: BayStar helm, cylinder (HC4645-3), two 30' tube assemblies, and fluid.

BayStar steering kit — HK4300A-3

Includes: BayStar helm, cylinder (HC4645-3), and fluid, NO tubing.

BayStar steering kit — HK4500A-3

Includes: BayStar Plus helm, cylinder (HC4645-3), and fluid, NO tubing.

NOTE: Effort reduction

Dometic has recently updated the BayStar cylinder. These updates include low friction main piston seals as well as low friction wiper and gland seals. If one chooses to further reduce steering effort, the following additional changes can be made:

- Consider plumbing the system using SeaStar steering hoses. See page 10-1 .
- Consider use of a BayStar Plus 1.4 cu.in. helm pump (HH4513-3/ HH4514-3).
- Consider use of a BayStar 1.1 cu.in. helm pump (HH4311-3).

NOTE: Number of wheel turns will increase to 6.6 hard over to hard over.

Figure 3-9.

3.1.4 BayStar outboard steering application guide

(BayStar compact cylinders HC4645-3/47-3/48-3/58-3)

1. Requires Spacer kit part # HO5090
 2. Engine clamp brackets must be cut or ground, and the engine through bolted onto the transom, or interference will occur, restricting engine trim and tilt.
 3. Steering hook Yamaha Part # 63D-48511-00-4D must be installed
 4. Cylinder HC4645-3 may be used in these applications. The pivot plate will need to be flipped before installation. Instructions provided with Owner's Manual.
 5. High performance 150HP engines and any engine using a 4-3/4" gear-case such as Command Thrust MUST use SeaStar.

Revision Date: **MARCH 31st 2022**

NOTICE!

HC4645-3 compact cylinder is included in the BayStar Steering kits. If your engine requires the use of a cylinder other than HC4645-3 or HC4658-3 then please refer to the figure below for additional replacement pivot plate.

HA4640

Comes with cylinder HC4645-3

HA4641

Converts HC4645-3 to HC4647-3

HA4642

Converts HC4645-3 to HC4648-3

HA4643

Converts HC4645-3 to HC4658-3

Figure 3-10.

3.2 SeaStar front mount series

SeaStar outboard hydraulic steering offers many models of steering cylinders to suit most applications. The standard and most commonly used model is the Front Mount steering cylinder. Before ordering it is necessary to determine the best possible application for your boat, taking into account the hull design, speed and usage of the boat. Keep in mind that engines today have become larger, more powerful and heavier than in the past. Dometic encourages you to use the tables noted in this section and select your system accordingly or visit www.SeaStarBOM.com and use our online system builder.

3.2.1 Selecting the outboard steering system best suited for your boat

1. Using the table on page 3-9, select your system as per speed, horsepower and driving style.
2. Using the Application chart on page 3-13 choose the proper cylinder and tie bar equipment as per your outboard engine. If your engine is not noted, contact SeaStar Solutions or your distributor for details.
3. Proceed to page 2-9 for details on fitting kits and particular equipment that will be needed to add a second station and/or an autopilot.

Typical SeaStar installation

Figure 3-11. Typical SeaStar installation.

Features

- Independent engine tilt for twin engine installations.
- Easy steering.
- 5 turns lock to lock steering response (1.7 standard system).

Applications

- General purpose system.
- Single and multiple engine capability.
- Typical applications include center console fishboats and cruisers.

How to select a front mount outboard steering system

1. From the installation recommendations on page 3-9 select the system configuration based on:
 - a) the number of engines,
 - b) the total power of engine(s) to be installed and
 - c) driving use.
2. From the application guides, confirm that the front mount cylinder will fit your specific make, model and year of engine. Select the adapter kit for single engines or the tie bar kit for dual engines.
3. From section 8 select the appropriate helms and accessory hardware for each steering station.
4. From Section 10 select the fitting and hose kits required for the installation.
5. Confirm that there is sufficient space available in the splashwell and dash areas for the steering components.
6. Determine if Power Assist is desired, section 6.

Figure 3-12. HC5345-3 cylinder shown.

CAUTION!

Not recommended for use in installations where;

- a) chopper, cleaver or surface piercing propellers are used
- b) the engine is highly elevated on the transom
- c) engine trim tabs have been removed
- d) the boat speed exceeds 75mph (120km/h), or
- e) the power exceeds the max. Coast Guard rating, or the rating provided by the vessel's manufacturer

3.2.2 Front mount outboard installation recommendations

Outboard recommendations made in this section are based on our experience with typical installations, applications and usage. Ensure you select the system which provides the best comfort versus performance.

It is the boat manufacturer and the installer's responsibility to ensure the components selected are sufficiently validated on the boat for safe and acceptable operation. Do not use SeaStar steering in applications it is not intended for.

	NORMAL USE	AGGRESSIVE USE (See note 1)
ENGINE	SEASTAR FRONT MOUNT (Refer to Section 3.2)	SEASTAR TOURNAMENT SERIES (See note 1 – Refer to Section 3.5)
SINGLE ENGINE	SINGLE CYLINDER 350 HP max. 75 MPH max. HC53XX-3 cylinder (see note 2)	SINGLE CYLINDER 350 HP Max. HC63XX-3 PRO cylinder page 3-16 through page 3-18 (See notes 2 & 3) or HC6845S (Refer to Section 3.3)
DUAL ENGINE NON COUNTER ROTATING	SINGLE CYLINDER 450 HP max. 55 MPH max. HC53XX-3 cylinder HO60XX tie bar	SINGLE CYLINDER Tournament cylinders (Refer to Section 3.5)
	DUAL CYLINDER Tournament cylinders (Refer to Section 3.5) HC53XX-3 Cylinders HO60XX tie bar	DUAL CYLINDER Tournament cylinders (Refer to Section 3.5)
DUAL ENGINE COUNTER ROTATING	SINGLE CYLINDER 600 HP max. 55 MPH max. HC53XX-3 cylinder HO60XX tie bar	SINGLE CYLINDER Tournament cylinders (Refer to Section 3.5)
	DUAL CYLINDER 600 HP max. 55 MPH max. HC53XX-3 cylinder HO60XX tie bar	DUAL CYLINDER Tournament cylinders (Refer to Section 3.5)
TRIPLE ENGINE ONE WITH COUNTER ROTATING	DUAL CYLINDER Tournament cylinders ((Refer to Section 3.5) 600 HP max. 55 MPH max. <i>*MAX center engine drop <.75"</i>	DUAL CYLINDER Tournament cylinders (Refer to Section 3.5)
	TRIPLE CYLINDER Tournament cylinders (Refer to Section 3.5) 900 HP max. 55 MPH max. <i>*MAX center engine drop <.75"</i>	Consider Optimus EPS or 360 (Refer to Section 11)

1. **SeaStar Solutions has specific steering equipment for boats that are driven aggressively, used in severe conditions or with more than 300 HP per engine.**
2. **ALL ENGINES** over 300 HP and all boats that are driven aggressively must use a high strength tiller bolt, kit part # HA5822. All front mount cylinders built after June 15, 2007 will have this high strength bolt included in the box. High strength tiller bolts can be identified by the marking "DOMETIC ARP" on the head of the bolt (refer to notice on page 3-14).
3. HC63xx PRO Cylinders are designed for all those critical high speed, single outboard engine boats, such as Bass, Flats combo Race/Ski and other performance orientated boats capable of speeds in excess of 65 mph. For optimal performance, the use of SeaStar PRO helms and PRO Hoses are recommended.

3.2.3 SeaStar front mount order guide

(Normal and aggressive use)

Front mount cylinder part# HC5345-3 is included in the SeaStar outboard steering kits HK6400A-3/HK63XXA-3. If your engine requires the use of a cylinder other than the HC5345-3 (see application guides on page 3-13 through page 3-15) you will need to purchase the individual components (helm, cylinder, hoses, etc.) separately.

Figure 3-13.

SeaStar steering kit — HK6400A-3

Includes: Cylinder (HC5345-3), Helm (HH5271-3), two quarts of SeaStar steering fluid (HA5430[H]).

SeaStar steering kit — HK63XXA-3

Includes: Hoses (HO51XX), Cylinder (HC5345-3), Helm (HH5271-3), two quarts of SeaStar steering fluid (HA5430[H]).

SeaStar steering kit – Classic tilt — HK6400TC-3

Includes: Cylinder (HC5345-3), Classic Tilt Helm (HH6541-3), two quarts of SeaStar steering fluid (HA5430[H]).

SeaStar steering kit – Sport tilt — HK6400TS-3

Includes: Cylinder (HC5345-3), Sport Tilt Helm (HH6191-3), two quarts of SeaStar steering fluid (HA5430[H]).

3.2.4 SeaStar tie bar kits

Normal use tie bar kits

SeaStar normal use tie bar (HO6001) kits for normal use up to 600 HP in counter-rotating applications.

Figure 3-14.

Aggressive use tie bar kits

SeaStar heavy duty tie bar system for aggressive use. Fully adjustable, for single cylinder and dual cylinder applications.

Figure 3-15. Twin engine, single cylinder tie bar kit part # HA5521.

Figure 3-16. Single engine, dual cylinder tie bar kit part # HA5522 for Mercury or Honda outboard engines using "O-O" style tiller arm only. Not for Suzuki.

NOTICE!

HA5522 must be used with Mercury or Honda outboard engines using this style of tiller arm and a single cylinder. In addition Honda outboards require the HA5523 bolt kit

Figure 3-17. Twin engine, dual cylinder tie bar kit part # HA5520.

CONFIGURATION	HARDWARE KIT		TIE BAR			NOTES
	Part #	Qty. Req.	Engine center to center distance – inches (mm)	Part #	Qty. Req.	
TWIN ENGINE – SINGLE CYLINDER	HA5521	1	25.0 – 25.7 (635 – 653)	HO6821	1	1, 3, 4, 5

	HA5520	1	29.1 – 30.6 (739 – 777)	HO6820	1	1, 2, 3, 4, 5
	HA5520	1	30.7 – 33.4 (779 – 848)	HO6821	1	1, 2, 3, 4, 5
	HA5520	1	33.5 – 38.4 (850 – 975)	HO6822	1	1, 2, 3, 4
	HA5520	1	38.5 – 47.1 (997 – 1196)	HO6823	1	1, 2, 3, 4
	HA5520	1	47.2 – 62.2 (1199 – 1580)	HO6824	1	1, 2, 3, 4

1. Installation may vary according to the following factors: engine mounting height, transom thickness, use of transom savers, tiller bolt location, engine tilt range, and engine size.
2. Cylinder's must be plumbed in parallel only, no series connections.

3. Tiebar length may vary depending on toe in/toe out setup. To allow for toe, add or subtract from your nominal engine center to center distance.
4. Based on recommended engine manufacturer minimum center to center distances. Deviating from these recommendations may require stroke limiting

5. Cylinder interference may occur with independent trim/tilt of the engines.
6. Mercury or Honda outboard engines using "O-O" style tiller arm only.

cylinders and/or engine tilt limiting, please consult Dometic technical support.

Revision Date: **MARCH 14th 2022**

3.2.5 Single engine application guide (Normal use)

Prior to selecting a cylinder from this application guide, please refer to page 3-9 to ensure that you are selecting the correct cylinder for your engine/boat.

NOTICE!

Is your Splashwell wide enough? Check page 3-17 for space requirements.

Revision Date: **APRIL 14th 2022**

NOTICE!

Front mount cylinder part# HC5345-3 is included in the SeaStar outboard steering kits HK6400A-3/HK63XXA-3. If your engine requires the use of a cylinder other than the HC5345-3 (see application guides on this page through page XX) you will need to purchase the individual components (helm, cylinder, hoses, etc.) separately.

NOTICE!

High Strength Tiller bolt, part# HA5822. ALL cylinders shipped after June 15th, 2007 have this bolt included in the cylinder package.

CAUTION!

Dometic recommends the use of SeaStar PRO (1500 psi) Kevlar steering hoses with SeaStar PRO helms.

3.2.6 Twin engine application guide (Normal use)

Prior to selecting a cylinder from this application guide, please refer to page 3-15 to ensure that you are selecting the correct cylinder for your engine/boat.

NOTICE!

Is your Splashwell wide enough? Check page 3-17 for space requirements.

NOTICE!

HO6001, HO6002 and HO6003 are for engine centers up to 36". For wider engine centers consider an aggressive tiebar kit.

1. HC5345-3 is optional for SINGLE ENGINE ONLY applications. Do not use HC5345-3 for twin engine applications as operational interference may occur.

2. Requires Kit HO5090.
3. Minimum Engine Center = 27".

4. HO5030 and HO5064 comes without Tie Bar.

5. Customer supplied SS washer must be installed under rod end.

6. Slight interference may occur with HO6001 tie bar, contact SeaStar Solutions technical support.

7. Refer to table on page 3-13 for tie bar part number.

8. Must use PA1200-2HP.

9. Mid 2022 change 2023 uses HC5345-3.

The above engine applications are current through the revision date shown. For up-to-date engine applications go to: www.dometic.com

Revision Date: **APRIL 14th 2022**

3.3 SeaStar PRO series

SeaStar PRO outboard steering systems are suited for all those critical high speed, single powered outboard boats, like Bass, Flats, combo Race/Ski and other performance orientated boats capable of speeds in excess of 65mph. Before ordering it is necessary to determine the proper cylinder and helm pump for your application. Using the table on page 3-17, choose the correct cylinder as per your outboard engine. Dometic recommends the use of a SeaStar PRO helm and SeaStar PRO (1500psi) reinforced Kevlar hoses with all SeaStar PRO systems.

There are characteristics of PRO steering that make it suitable for high speed boats but unsuitable for regular boats that do not chime walk.

Figure 3-18. Cylinder part # HC6345-3 shown.

3.3.1 Helm pumps

SeaStar PRO steering systems have the option to install a standard front mounting helm, both classic and sport tilt as well as rear mount helm pumps. Please refer to Section 8 for style and PRO helm part numbers.

CAUTION!

Dometic recommends the use of SeaStar PRO hoses HO57XX with SeaStar PRO helms. Refer to Section 10 or other PRO hose options.

3.3.2 SeaStar PRO application guide

NOTICE!

Is your Splashwell wide enough? Check below for space requirements.

MANUFACTURER	YEAR	MODEL	CYLINDER	NOTES
HONDA	2001–DATE	150–250 HP 4-Stroke	HC6345-3	HA5472 stroke limit kit must be installed when using on 200–250 HP 4-Stroke (pre 2023 only)
JOHNSON/EVINRUDE	2002–DATE 2003–DATE 2005–DATE	150–250 HP 4-Stroke 150-300 HP ETech 250 HP DPX Vindicator	HC6345-3 HC6345-3 N/A	
MERCURY	1989–DATE	150–300 HP 2-Stroke, 4-Stroke and XS engines Inc. 4.6L V8	HC6345-3	
SUZUKI	1986–DATE	150–300 HP 2 and 4-Stroke	HC6345-3	Includes all 4-Stroke models.
YAMAHA	1986–DATE	150–350 HP 2 and 4-Stroke	HC6345-3	

Revision Date: **APRIL 12th 2022**

NOTICE!

The HC6345-3 cylinder has the same fitment as the HC5345-3. If your engine is not listed check page 3-13 through page 3-14 for compatibility.

WARNING!

SeaStar PRO steering helms can not be used with an unbalanced steering cylinder.

Dometic offers the following SeaStar PRO kits. Every kit ships with the HC6345-3 PRO Steering cylinder, HH5770-3 PRO front mount helm pump, two bottles of SeaStar steering fluid and two equal lengths of SeaStar PRO, Kevlar steering hoses.

PART #	HOSE LENGTH
HK7500A-3	No hose
HK7514A-3	14'
HK7516A-3	16'
HK7518A-3	18'

PART #	HOSE LENGTH
HK7520A-3	20'
HK7522A-3	22'
HK7524A-3	24'

3.3.3 Cylinder installation, general dimensions and replacement parts

Motor well dimensions required for front mount outboard steering systems.

# of engines	A	B	C	Min. engine center distance	Max. transom thickness
1	22" (559 mm)	6" (152 mm)	5" (127 mm)	N/A	3"
2	49" (1,244 mm)	6" (152 mm)	5" (127 mm)	26" (660 mm)	3"

NOTES:

- Dimensional restrictions also apply to external motor mount brackets.
- Maximum engine center distance for twin engine applications is 36" (914mm) using the standard tie

- Dimension 'A' would have to be increased proportional to the tie bar length.
- Minimum engine center distance is 26" unless engine manufacturer recommendation is greater.

- Splashwells of less than 30" in overall width may require engine removal in order to install and service the support rod.

WARNING!

Operational interference of the steering cylinder/cylinder fittings and jackplates/transom/splashwell can occur under certain conditions. Check installation thoroughly throughout the full range of motor tilt, jackplate height and trim before making final installation.

If interference is not eliminated total steering loss can occur, causing property damage and/or personal injury.

For specific trim limit options consult your engine manufacturer.

Figure 3-19.

Dimensions — all front mount cylinders

Figure 3-20.

NOTICE!

Pivot plate dimensions vary depending on exact cylinder model.

3.4 SeaStar commercial grade outboard cylinder

The SeaStar commercial grade steering cylinder part # HC5345-3CM is a direct replacement for vessels or applications using the current HC5345-3 cylinder. Enhanced features and improved salt water corrosion resistance make it commercial grade.

HC5345-3CM features

1. High grade stainless steel shaft with state-of-the-art surface treatment.
2. End glands equipped with metal scrapers keep ice and debris out of the wiper and seals.

Figure 3-21. HC5345-3CM SeaStar commercial grade steering cylinder for outboard engines.

NOTE

The metal scraper end glands used in this cylinder can be purchased separately to retrofit current SeaStar cylinders. Kit part # HS5167MS (includes 2 end glands).

NOTE

If you require assistance with applications, parts, or information about SeaStar commercial grade steering cylinder part # HC5345-3CM please contact Dometic technical support department at 604-248-3858 or email us at seastar@dometic.com.

3.5 SeaStar Tournament series

(Aggressive use)

Extreme heavy duty cylinders and tie bars designed for primarily high performance multiple engine applications. Also available for single engine applications.

Features

- Suitable for use with all SeaStar helms and SeaStar Power Assist.
- Heavy duty universal cylinder.
- Reversible, bolt on stainless steel tie bar plates.
- Robust design with heavy duty support brackets, barrel, shaft & seals.
- Superior corrosion resistance.
- New patented pivot plate design provides smooth articulation and a sealed joint.
- Heavy duty adjustable tie bar (patent pending).
- Equipped with stainless steel adjustable O-ring sealed elbow fittings which can be easily orientated.

Figure 3-22.

3.5.1 Tournament series application guide

CONFIGURATION	CYLINDER		HARDWARE KIT		TIEBAR			NOTES
	Part #	Qty	Part #	Qty	Engine center distance inches (mm)	Part #	Qty	
SINGLE ENGINE — SINGLE CYLINDER	HC6845*	1	HA6801	1	N/A	N/A	N/A	1
TWIN ENGINE† — SINGLE CYLINDER (Starboard)	HC6845*	1	HA6802	1	25.0–25.6 (635–650) 25.7–30.6 (653–777) 30.7–39.4 (780–1,001) 39.5–54.0 (1,003–1,372)	HO6821 HO6822 HO6823 HO6824	1 1 1 1	1, 3, 4, 5 1, 3, 4, 5 1, 3, 4, 5 1, 3, 4, 5

TRIPLE ENGINE† — DUAL CYLINDER	HC6845*	2	HA6806	1	25.0–27.9 (635–709) 28.0–36.0 (711–914) 36.0–51.0 (914–1,295)	HO6822 HO6823 HO6824	2 2 2	1, 2, 3, 4, 5, 6 1, 2, 3, 4, 5, 6 1, 2, 3, 4, 5, 6
QUAD ENGINE† — DUAL CYLINDER	HC6845*	2	HA6811	1	Consult Dometic technical service			1, 2, 3, 4, 5
QUINTUPLET ENGINE (Plus)	Consult Dometic technical service							1, 2, 3, 4, 5

1. Installation may vary according to the following factors: engine mounting height, transom thickness, use of transom savers, tiller bolt location, engine tilt range, and engine size.
2. For center engine drops greater than 3 inches (76 mm), please consult Dometic technical service.
3. Tie Bar length may vary depending on toe in/toe out setup. To allow for toe, add or subtract from your nominal engine center to center distance.
4. Based on recommended engine manufacturer minimum center to center distances. Deviating from these recommendations may require stroke limiting cylinders and/or engine tilt limiting, please consult Dometic technical service.
5. Cylinder's must be plumbed in parallel only, no series connections. Only exception is if cylinders are utilizing a liquid tie bar.
6. Maximum drop: ≤ 3 inches (76 mm).

Revision Date: **JANUARY 21st 2022**

- * HC6850 for Honda V6 or where stroke reduction is desired. Yamaha 3.3L engine requires one cylinder per engine.
- † Mercury multi engine applications may require additional parts, contact Dometic technical support.
OXE 300 must use dual cylinder HC6850 for twin engine, no single cylinder option. For triple engine setup two HA6864 bolt kits must be used for center engine.

NOTICE!

Required for triple engine installs on Mercury Optimax and PROs and engines with a single tiller hole. May fit other applications, call Dometic technical support for more information.

CONFIGURATION	CYLINDER		HARDWARE KIT		TIEBAR			NOTES
	Part #	Qty	Part #	Qty	Engine center distance inches (mm)	Part #	Qty	
TRIPLE ENGINE — TRIPLE CYLINDER	HC6845*	3	HA6807	1	28.0–28.8 (711–736) 28.9–30.5 (737–774) 30.6–33.3 (775–847) 33.4–38.3 (848–974) 38.4–47.0 (975–1,194) 47.1–62.1 (1,195–1,578)	HO6819 HO6820 HO6821 HO6822 HO6823 HO6824	2	1, 2, 3, 4 1, 2, 3, 4 1, 2, 3, 4 1, 3, 4, 6 1, 3, 5, 6 1, 3, 7

1. Installation may vary according to the following factors: engine mounting height, transom thickness, use of transom savers, tiller bolt location, engine tilt range, and engine size.
2. Will require trim limiting at 0" (0 mm) drop.**
3. Tie Bar length may vary depending on toe in/toe out setup. To allow for toe, add or subtract from your nominal engine center to center distance.
4. Maximum drop 1.5" (38 mm) with trim limiting.**
5. Maximum drop 1.5" (38 mm) without trim limiting.
6. Maximum drop 3" (76 mm) with trim limiting.**
7. Maximum drop 3" (76 mm) without trim limiting

Revision Date: **JUNE 11th 2021**

- * HC6850 for Honda V6 or where stroke reduction is desired.
- ** Trim limiting required as interference between the tie bar and support bracket will occur during independent trim/tilt.

3.5.2 Engine configurations

It is important to note that each engine configuration requires a hardware kit and tie bar kit(s), with the exception of the single engine configuration, use the HC6845S.

Figure 3-23. Single engine – single cylinder configuration.

Figure 3-24. Twin engine – single cylinder (starboard) configuration.

NOTICE!

The twin engine – single cylinder configuration requires installation of the drive bracket before installing the steering cylinder onto the engine. (Refer to your installation manual.)

Figure 3-25. Twin engine – dual cylinder configuration

Figure 3-26. Triple engine – dual cylinder configuration.

NOTICE!

Depending on engine, the cylinder may be mounted different than that shown below. See application chart page 3-21.

Figure 3-27. Triple engine – triple cylinder configuration.

CAUTION!

Before connecting the tie bars refer to Section 3.5 of book 48 "Tie bar adjustment and Installation".

3.5.3 Dimensions — Tournament series cylinder

Max. tilt angle shown – 67°. Typical transom thickness shown, but may vary.

Figure 3-28. Tournament cylinder dimensions.

WARNING!

Operational interference of the steering cylinder/cylinder fittings and jackplates/transom/splashwell can occur under certain conditions. Check installation thoroughly throughout the full range of motor tilt, jack height and trim before making final installation. If interference is not eliminated total steering loss can occur, causing property damage and/or personal injury.

3.6 SeaStar catamaran series

Dometic always recommends a mechanical tie bar between engines where possible. In applications where a mechanical tie bar cannot be fitted, it is recommended that you use a “liquid tie bar valve”. This valve will serve two purposes; assisting with the air removal from the system and allows the user to re-align the engines when they come out of sync. Regardless of the application, a mechanical, or, liquid tie bar must be fitted. Due to the potential of leakage across the piston seals, use of standard SeaStar outboard cylinders may require frequent engine realignment. If you must use a “liquid tie bar”, Dometic recommends that you order the following parts below. Doing so will decrease the amount of re-alignment required.

3.6.1 Steering cylinders

Figure 3-29. Liquid tie bar valve HA5471-2.

HA5471-2, Liquid tie bar valve

This valve assists with air removal and re-alignment of the engines when required without having to break into the hydraulic system.

HC5375-3, Catamaran steering cylinder

The HC5375-3 steering cylinder has the same mounting and design properties as the HC5345-3 front mount cylinder. The internal piston seals are different. This difference decreases the amount of engine re-alignment that you may encounter.

SeaStar PRO helm

Use of a SeaStar PRO helm coupled with the HC5375-3 steering cylinders will drastically reduce the amount of engine realignment that you may encounter. For other engines not using the HC5345-3 please call Dometic technical service at 604-248-3858.

SeaStar PRO hose (Kevlar)

To further reduce engine misalignment, and increase system performance, Dometic recommends the use of SeaStar PRO steering hoses.

NOTICE!

Due to plumbing requirements, all “liquid tie bar” systems should use a 1.7 cu.in. helm pump. Even though there are physically two cylinders in the system, the total volume of the system is that of one cylinder. Use of a 2.4 helm will result in heavier steering effort.

NOTICE!

In high horsepower applications Dometic recommends using Optimus. SeaStar power assist is also a good option to reduce steering effort.

NOTICE!

Bleeding of a “liquid tie bar system” is different than a system fitted with a mechanical tie bar. Please refer to your installation and owner’s manual that is shipped with the liquid tie bar valve.

3.7 SeaStar side mount series

Part # HC5370-3

Features

- Alternative to front mount cylinder.
- Unbalanced cylinder with 4.8/5.7 turns lock to lock (1.7 helm).
- Suitable for installation in shallow splashwells.

NOTICE!

For Outboard engine use only.

Applications

- All engines with threaded tilt (steering) tubes complying with ABYC P17/ABYC P21/NMEA/BIA standards for mechanical steering.
- Cylinder attaches to the engine tilt tube as per ABYC/NMEA/BIA standard.
- Single and multiple outboard engine installations.
- Total power to 600HP in twin counter rotating application.
- Typical applications include center console fishboats and cruisers.
- Ease of installation.

How to select a side mount outboard steering system

1. From the order guide on page 3-27 select the system configuration based on;
 - a) the number of engines, and
 - b) the total power of engine(s) to be installed.
2. From the order guide select the cylinder(s) & tie bar kits required.
3. From the order guide select the appropriate helms and accessory hardware for each steering station.
4. From the order guide select the fitting and hose kits required for the installation.
5. Confirm that there is sufficient space available in the splashwell and dash areas for the steering components.

WARNING!

Not for use with SeaStar PRO helm pumps.

Figure 3-30. HC5370-3 cylinder shown.

NOTICE!

Not recommended for use in installations where;

- a) chopper, cleaver, or surface piercing propellers are used,
- b) the engine is highly elevated on the transom,
- c) engine trim tabs have been removed,
- d) the boat speed exceeds 75mph (120km/h), or
- e) the power exceeds maximum Coast Guard or M.O.T. recommendations for the boat.

3.7.1 Order guide

ENGINE/CYLINDER CONFIGURATION	DESCRIPTION	QTY REQ.	MODEL	PART #	REF. SECTION

			Autopilot fitting kit (for all -3 helms)	HF6007	Section 10
			Power assist steering	PA1200-2	Section 6
			*All non-pro helm designs can be used, see Section 8 for options.		

Revision Date: **FEBRUARY 8th 2022**

3.7.2 General dimensions

Dimensions — tie bar HO5009 for side mount cylinder

ENGINE CENTRE DISTANCE
Maximum: 36" (914 mm)
Minimum: 26" (660 mm)

Figure 3-31. Tie bar part # HO5009.

Dimensions — side mount cylinder HC5370-3

Figure 3-32. Side mount cylinder part # HC5370-3.

CAUTION!

Do not attempt to install NPT pipe fittings into the cylinder fitting ports on this, or any other -3 steering cylinder model. Doing so will lead to irreparable damage to the cylinder. Only use ORB hose fittings provided by Dometic.

3.8 SeaStar splashwell mount series

Part # HC5380-3

Features

- Light duty alternative to front & side mount cylinders.
- Unbalanced cylinder with 5.5/6.5 turns lock to lock.
- Fits engines with/without support (steering) tube.

Applications

- Single and multiple engine capability.
- Total power to 600HP in twin counter rotating applications (see order guide).
- Transom mounted cylinder.
- Speeds to 60mph maximum (97km/h).

How to select a side mount outboard steering system

1. From the order guide on page 3-30 select the system configuration based on;
 - a) the number of engines, and
 - b) the total power of engine(s) to be installed.
2. Select the cylinder and tie bar kit required.
3. From the order guide select the appropriate helms and accessory hardware for each steering station.
4. From the order guide select the fitting and hose kits required. You will have to determine the configuration, length, number of hose and fitting kits required for the installation (refer to page 3-30).
5. Confirm that there is sufficient space available in the splashwell and dash areas for the steering components.

WARNING!

Not for use with SeaStar PRO helm pumps.

Figure 3-33. HC5380-3 cylinder shown.

NOTICE!

Not recommended for use in installations where;

- chopper, cleaver, or surface piercing propellers are used,
- the engine is highly elevated on the transom,
- engine trim tabs have been removed,
- the boat speed exceeds 60mph (75km/h), or
- the power exceeds maximum Coast Guard or M.O.T. recommendations for the boat.

3.8.1 Order guide

The splashwell mount cylinder (part # HC5380-3) can be used on all engines complying with ABYC P17/NMEA/BIA standards provided they have a threaded attachment hole (3/8" – 24 UNF thread) in the steering arm. Not suitable for use on engines fitted with factory power steering.

ENGINE/CYLINDER CONFIGURATION	DESCRIPTION	QTY REQ.	MODEL	PART #	REF. SECTION
SINGLE ENGINE (Single Cylinder) Applications up to 300 HP max. Number of turns 5.5/6.5 	Cylinder	1	Splashwell	HC5380-3

			*All non-pro helm designs can be used, see Section 6 for options.		

Revision Date: **FEBRUARY 8th 2022**

3.8.3 Mounting configuration — splashwell mount cylinder HC5380-3

Figure 3-34. Splashwell mount cylinder part # HC5380-3.

NOTICE!

Do not use a PRO helm pump with this, or any other unbalanced steering cylinder.

3.8.3 Dimensions — splashwell mount cylinder HC5380-3

Figure 3-35. Splashwell mount cylinder part # HC5380-3.

CAUTION!

Do not attempt to install NPT pipe fittings into the cylinder fitting ports on this, or any other -3 steering cylinder model. Doing so will lead to irreparable damage to the cylinder. Only use ORB hose fittings provided by Dometic.

3.9 SeaStar kicker cable tie bar

This SeaStar kicker cable tie bar allows users to manually steer an auxiliary engine (kicker/trolling motor) using their existing SeaStar hydraulic steering system. This is accomplished with a variety of solid mechanical linkages between the main steering cylinder and the auxiliary engine. Dometic has developed a patent pending design that incorporates an Xtreme™ cable as the linkage between the two engines.

Features

- Flexible cable allows for adjustable locations of kicker motor.
- Allows independent trim/tilt of both engines.
- Allows full steering stroke of both engines.
- Simplified installation using universal ABYC steering connection (as per ABYC P17 and P21 standards) on kicker motors.
- Retrofittable to SeaStar front mount cylinders, part # HC5345, HC5358, HC5348, HC5345-3, HC5358-3 and HC5348-3 only, or the HC5445-3.
- Incorporates unique patented cable technology.
- Kicker can be mounted on either side of the main engine(s).

NOTICE!

Maximum 20HP kicker engine.

Figure 3-36. Kicker cable tie bar.

CAUTION!

Contact Dometic technical support when using on BF200–BF250 engines.

3.9.1 Measuring cable length

Jackplate vertical travel	Add to 'X' dimension
10" — 12"	X + 3"
13"	X + 4"
14" — 15"	X + 5"
16" — 20"	X + 6"

HO6116/HO6118

X = Tilt Tube to Tilt Tube (Inches)

1. For a Kicker installed on a motor bracket, add additional length to X dimension.
2. For Main engine installed on a motor bracket add an additional 2" to X dimension.
3. Kicker cable tie bar systems require a minimum clearance of 14" from the end of the tilt tube towards the motor side well gunnel.

Figure 3-37.

CAUTION!

Do not install on applications that are outside of the cable ranges. Doing so may lead to irreparable damage to the kicker cable tie bar.

Figure 3-38.

4 Hydraulic Inboard Steering

4.1 BayStar inboard series

NOTICE!

May not be available in all markets, visit: www.dometic.com for availability.

Built in the same tradition as SeaStar inboard steering, these BayStar systems are designed for relatively low torque inboard applications, including inland waterway boats and other low speed displacement vessels.

The systems are easy to install with “cut-to-length” tubing. Available in complete kits or by individual components. For detailed application information go to www.dometic.com

**If unsure of total steering loads, contact Dometic technical support for assistance*

Features

- Compact cylinder design
- HC4460-3 – 6.25” stroke
- HC4461-3 – 6.0” stroke
- Optional tilt helm available
- Helm fits standard 3” dash cut outs
- Fast easy installation

4.1.1 Order guide

ORDER INFORMATION	PART #
BayStar inboard cylinder	HC4461-3
BayStar inboard cylinder	HC4460-3
BayStar helm 1.1 cu-in	HH4311-3
BayStar helm 1.4 cu-in	HH4313-3
BayStar 20ft tubing kit	HT4420
1 Litre steering fluid	HA5430
BayStar Sport Tilt helm	HH4315-3
BayStar mounting kit	HA5476
BayStar inboard steering kit (comprising: H4314 helm, HC4461 cylinder, HT4420 tubing kit, 2 x HA5430 fluid)	HK4401
BayStar inboard steering kit (comprising: HH4314 helm, HC4460 cylinder, HT4420 tubing kit + 2 x HA5430 fluid)	HK4400H

Table 4-1.

CAUTION!

If unsure of total steering loads, contact Dometic technical support for assistance.

4.1.2 Dimensions — BayStar standard helm

HH4311-3 (1.1 cu. in.) and **HH4314-3** (1.4 cu. in.). Refer to page 8-17 for total wheel turns.

Figure 4-2.

HC4460-3 BA125-6.25 ATM

ATTACHMENT TO TILLER ARM

Figure 4-3.

4.2 SeaStar inboard series

Features

- Regular duty cylinders.
- Heavy duty cylinders.
- Easy installation for single and dual rudder vessels.
- Cylinders supplied with bleeder fittings.
- Two axis articulation.
- Easy autopilot interface.

4.2.1 Steps to select a steering system for an inboard powered boat

1. Using the cylinder flow chart on page 4-4 determine the steps required.
2. If applicable gather the information needed to complete a torque rudder sheet or consult your naval architect.
3. Confirm that you have sufficient space available in;
 - a) the area the cylinder is to be mounted in
 - b) the dash area for all steering components.

Figure 4-4.

4.2.2 Inboard cylinder selection flowchart

NOTICE!

If assistance is needed at any point contact Dometic technical service at 604.248.3858

SAILBOAT NOTICE

Dometic Marine is unable to support rudder calculations for sailboats. They are outside of our area of expertise and the calculations we use to determine the expected rudder torque are not suited for sailboat applications. Please contact a naval architect or complete applicable rudder torque calculations to find the expected maximum torque about the rudder post during operation. Page 8-16 of this document can then be used to select an appropriate system for your application.

Figure 4-5.

4.2.3 Dimensions — SeaStar inboard series cylinders

WARNING!

Do not attempt to install NPT pipe fittings into the cylinder hose fitting ports on any -3 model cylinder. Doing so will lead to irreparable damage to the cylinder. Only use ORB hose fittings provided by Dometic.

HC5312-3 / HC5313-3 / HC5314-3 / HC5319-3 / HC5373-3
ATM cylinders (Aluminum)

Cylinder dimensions specific to model

Figure 4-6.

CYLINDER MODEL	PART #	A			B	C	SHAFT DIA.	ROD END DIA.
		Retracted	Mid-Stroke	Extended				
BA125-7ATM	HC5312-3	16.5" (419.1 mm)	20.0" (508.0 mm)	23.5" (596.9 mm)	8.30" (210.8 mm)	13.62" (345.1 mm)	0.50" (12.7 mm)	1/2"
BA135-7ATM	HC5313-3	16.34 (415.0 mm)	19.83" (503.6 mm)	23.32" (592.3 mm)	8.30" (210.8 mm)	13.62" (345.1 mm)	0.63" (15.9 mm)	1/2"
BA150-7ATM	HC5314-3	16.5" (419.1 mm)	20.0" (508.0 mm)	23.5" (596.9 mm)	8.30" (210.8 mm)	13.62" (345.1 mm)	0.63" (15.9 mm)	1/2"
BA150-7ATM	HC5314-3*	16.875" (428.6 mm)	20.375" (517.5 mm)	23.875" (606.4 mm)	8.30" (210.8 mm)	13.62" (345.1 mm)	0.63" (15.9 mm)	5/8"

Table 4-2. *If using HC5314-3 with a 5/8" rod end (HP6093) the mounting foot position will need to be adjusted.

HC5319-3 / HC5373-3 1.75" dia. cylinders (Aluminum)

An updated series of SeaStar hydraulic aluminum inboard steering cylinders. These two cylinders are direct replacements for existing products and have updated features and enhanced appearance. Previous designs will no longer be available as replacements become available.

PART #	DESCRIPTION
HC5319-3	1.75" Bore x 7" Stroke, Aluminum, Ball Mount
HC5373-3	1.75" Bore x 9" Stroke, Aluminum, Ball Mount

Table 4-3.

Fittings — The cylinder fittings are made of corrosion resistant 316 stainless steel and now thread in to the cylinder via adjustable O-ring sealed ports. The fittings can be easily oriented in any direction to accommodate tube routing. Thread sealant is not required. Cylinders are shipped with SeaStar type hose fittings, if you require 3/8" SAE fittings, use the HF6003 fitting kit.

Seals — Gland and piston seals have been updated and optimized for lower friction and longer life.

Service Kits

	GLAND KIT	ROD END KIT	FITTING KIT
HC5319-3	HP6071	HP6013	HF6002*
HC5373-3	HP6071	HP6013	HF6002*

Table 4-4. * Alternate vertical fitting kit (HF6001), or 3/8" SAE fitting kit (HF6003), can also be used.

Mounting/bore/stroke — These cylinders retain the same mounting configurations and dimensions as previous models, however the cylinder bore may have changed. Refer to the detailed chart as well as the mounting dimensions shown in figure 4-6.

Cylinder to be Obsoleted		Cylinder Replacement	Notes
HC5318	BA150-7TM	HC5319-3 or HC5314-3	1, 4
HC5319	BA175-7TM	HC5319-3	4
HC5319-A	BA175-7TM	HC5319-3	4
HC5349	BA150-7TM c/w Tees	HC5319-3 or HC5314-3	1, 4
HC5350	BA175-7TM c/w Tees	HC5319-3	4
HC5355	BA150-7TM Clevis/Tee	HC5319-3 or HC5314-3	1, 4
HC5356	BA175-7TM Clevis/Tee	HC5319-3	4
HC5369	BA150-9TM	HC5373-3	2, 4
HC5373	BA175-9TM c/w Tees	HC5373-3	4
HC5318CAT	BA150-7TM Catamaran	HC5319-3	1, 3, 4
HC5319CAT	BA175-7TM Catamaran	HC5319-3	1, 3, 4

Table 4-5.

Notes

- HC5314-3 has the same bore and stroke as the obsolete cylinder, but a different mounting pattern. HC5319-3 has the same stroke and mounting pattern as the obsolete cylinder, but the larger bore will result in more system turns lock to lock.
* The HC5314-3 uses a 1/2" rod end, if replacing a ram with a 5/8" rod end use HP6093 in addition.
- HC5373-3 has same stroke and mounting pattern as the obsolete cylinder, but the larger bore will result in more system turns lock to lock.
- The two new cylinders (HC5319-3, HC5373-3) are both designed for use in catamaran applications. Special "CAT" cylinders are no longer required.
- All new cylinders use re-positionable ORB bleed tee fittings.

4.3 SeaStar catamaran inboard series

Dometic always recommends a mechanical tie bar between rudders where possible. In applications where a mechanical tie bar cannot be fitted, it is recommended that you use a “liquid tie bar valve”. This valve will serve two purposes; assisting with the air removal from the system and allows the user to re-align the rudders when they come out of sync. Regardless of the application, a mechanical, or, liquid tie bar must be fitted. Due to the potential of leakage across the piston seals, use of standard SeaStar inboard cylinders may require frequent engine realignment. If you must use a “liquid tie bar”, Dometic recommends that you order the following parts below. Doing so will decrease the amount of re-alignment required.

4.3.1 Steering cylinders

HA5471-2, Liquid tie bar valve

This valve assists with air removal and re-alignment of the rudders when required without having to break into the hydraulic system.

HC5319-3 Catamaran steering cylinders

The HC5319-3 has the same properties as the HC5319 inboard cylinder but the internal piston seals are different. This difference will decrease the amount of rudder re-alignment that you would encounter.

SeaStar PRO helm

Use of a SeaStar PRO helm coupled with the inboard steering cylinders will drastically reduce the amount of rudder realignment that you may encounter. For other applications please call Dometic technical service at 604-248-3858.

SeaStar PRO hose (Kevlar)

To further reduce engine misalignment, and increase system performance, Dometic recommends the use of SeaStar PRO steering hoses.

Figure 4-7. Liquid tie bar valve HA5471-2.

NOTICE!

In high horsepower applications Dometic recommends using Optimus. SeaStar power assist is also a good option to reduce steering effort.

NOTICE!

Bleeding of a “liquid tie bar system” is different than a system fitted with a mechanical tie bar. Please refer to your installation and owner’s manual that is shipped with the liquid tie bar valve.

5 Hydraulic Sterndrive Steering

5.1 SeaStar sterndrive series

Features

- Easy installation.
- Simple autopilot interface.
- Simple multiple steering station connection.

Applications

- Fits most power and non-power assist sterndrives.
- Single and multiple drives.

5.1.1 Steps to select a steering system for an sterndrive powered boat

1. From the order guide on page 5-2 select the drive configuration based on the number of drives.
2. From the application guide on page 5-3 confirm that a cylinder is available for your specific make, model and year of drive unit. Select the cylinder that is appropriate for the drive.
3. From the order guide select the appropriate helm and accessory hardware. Note that helm pumps of different displacements are available for power steered sterndrives. The displacement of the helm affects the number of turns lock to lock. Select the helm displacement on the basis of the desired steering response.
4. Select the appropriate tube or hose and fitting kits.
5. Confirm that sufficient space is available in the dash and engine compartments for the equipment.

Figure 5-1.

5.1.3 Order guide

SYSTEM CONFIGURATION	DESCRIPTION	QTY REQ.	MODEL	PART #	REF. SECTION
SINGLE & DUAL STERNDRIVE For dual sterndrive applications use engine manufactures supplied tie bar. 	Cylinder	1	See application guide		
	Helm	1	SeaStar (see note 1)* SeaStar (see note 2)**	HH5271-3 HH5272-3	Section 8 Section 8
	Steering fluid Tube/hose	3	SeaStar fluid	HA5430	Section 9 Section 10
	For extra steering stations add				
	Helm	1	SeaStar (see note 1)* SeaStar (see note 2)**	HH5271-3 HH5272-3	Section 8 Section 8
	Fitting kit	1	Add a station – for use with SeaStar Steering hose	HF6007	Section 10
	Steering fluid	1	– for use with SeaStar Steering tube/copper SeaStar fluid	HF6010	Section 10 Section 9
	Optional equipment		Back plate kit (for standard helms) 20° wedge (for standard helms) Autopilot fitting kit – for use with SeaStar hose – for use with SeaStar tube/copper Power assist steering	HA5418 HA5419 HF6007 HF6010 PA1200-2	Section 8 Section 8 Section 10 Section 10 Section 6
			*All non-pro helm designs can be used, see Section 6 for options.		

Revision Date: **FEBRUARY 9th 2022**

1. SeaStar helms are the standard recommendation for both non-power and power steered applications.
2. SeaStar helms with a higher displacement can be specified for less wheel turns where faster response is desired. Consult the chart on page 8-17 for options.
3. For dual stern drives – use the tie bar supplied by the engine manufacturer.

NOTICE!

These recommendations apply to factory stock stern drives only. Modified installations and high performance applications may require a higher capacity steering system. If in doubt, contact Dometic technical service for assistance.

1. Balanced system – ie: the number of turns lock to lock is equal port to starboard or vice-versa.
2. Unbalanced system – ie: the number of turns lock to lock is not equal port to starboard or vice-versa.
3. Requires cylinder rod end adapter HA5424 supplied by Dometic. Refer to diagram on page 5-5.
4. HC5332 replaces HC5326-3 as of January 2000. If installing HC5326 additional clevis supplied by engine manufacturer required. Mastry Engine part # SUN144 *not provided by SeaStar Solutions.
5. The installation of the HC5332-3 sterndrive cylinder requires the use of SeaStar hose only. Do not use 3/8" copper or nylon tube.
6. If engine outdrive is not equipped with a torque tab on the underside of the lower leg one must be installed to reduce prop torque.
7. Yanmar Engines using the Bravo III drives require the use of cylinder HC5328-3.
8. Use of a 2.4 helm is not recommended.
9. HC5332 is recommended if the Volvo transom shield looks like that shown in figure 5-2 below.

Revision Date: **APRIL 4th 2022**

VOLVO TRANSOM SHIELD

Figure 5-2.

5.1.4 General dimensions

WARNING!

Do not attempt to install NPT pipe fittings into the cylinder hose fitting ports on any -3 model cylinder. Doing so will lead to irreparable damage to the cylinder. Only use ORB hose fittings provided by Dometic.

HC5332 BA135-6.88EM

Figure 5-3.

NOTICE!

If engine outdrive is not equipped with a torque tab on underside of lower leg, one must be installed to reduce prop torque.

CAUTION!

Due to cylinder body movement during steering, this cylinder requires use of SeaStar hose (HO51xx), see Section 10 for details.

6 Hydraulic Power Assist and Autopilot

6.1 SeaStar power assist steering

The marine industry is continually introducing heavier outboard engines, higher horse power engines, more aggressive propellers, bigger/faster boats...

Boat operators are asking for increased comfort and lighter steering loads... These were the driving forces behind the design of SeaStar and SeaStar PRO power assist.

This innovative product is highly recommended on any 150HP and above outboard application to give your boat the same, easy steering you are accustomed to in your car.

Power assist is recommended for the following:

- Single engine boats
- Twin and triple engine applications
- Bass boats
- Pontoon boats (150HP+)
- Inboard powered cruisers without engine driven power assist

Figure 6-1. SeaStar power assist PA1200-2.

6.1.1 How the system works

SeaStar P/A (Power Assist) steering uses an electronically controlled on-demand hydraulic pump to provide “Power” for your SeaStar hydraulic steering system.

The SeaStar P/A system is comprised of two circuits: a hand operated manual system, which is the control element, and a hydraulic power pump, which is the working element.

The manual system consists of a helm pump with internal relief and check valves, as well as a built in reservoir. Two steering lines and a compensating line which provide a routing for fluid to transmit through the system, and a steering cylinder which moves the steering device on the boat from side to side.

The power system, is an electronically controlled hydraulic pump that boosts the fluid being sent from the helm pump to the steering cylinder (this will result in much easier effort at the wheel—even when under heavy loads). A compensating line connects the P/A unit to the helm pump, allowing the P/A unit to share fluid with the helm reservoir.

The SeaStar P/A is compatible with multiple steering stations, and with the use of an autopilot. In the event of a P/A power loss or failure the hydraulic system will automatically revert to a manual hydraulic system.

Figure 6-2. Typical installations shown. Please refer to your cylinder installation manual for proper hose installation diagrams.

6.1.2 SeaStar P/A compatibility

NOTICE!

For helm displacements greater than 2.4, twin power assist pumps must be used. Contact Dometic technical support for details.

The P/A is designed for use in recreational marine applications in conjunction with SeaStar hydraulic steering. Optimal performance will be obtained when used with SeaStar 1.4, 1.7, 2.0 and 2.4 cu in (1000 psi) helm pumps

Recommended convenience parts to be purchased

- Dual ignition control kit, part # HA1201
- 50 amp harness fuse kit, part # HA1206

NOTICE!

SeaStar nylon tube may only be used for the compensating line. Do not use SeaStar nylon tube to plumb any other portion of the steering system.

NOTICE!

Plan ahead. The power assist must be mounted in a “dry” location. Hose lengths must be at least 6’ (feet) between the power assist and helm pump or between the power assist and steering cylinder(s).

NOTICE!

When fitted with a PRO helm pump and PRO power assist there will be variations in steering effort. At the beginning of a trip the wheel will be very easy to turn and will get progressively heavier after several wheel turns are made. This is not considered a fault.

NOTICE!

Use only Dometic products with the P/A unit as with all SeaStar systems. Failure to do so may void your warranty.

NOTICE!

Retrofit kit part # HA1205 will be required to mount to a SeaStar autopilot pump to any power assist model.

6.1.3 Specifications

SeaStar power assist 12/24V

- 12/24 Volts (automatically recognized)
- 1000psi MAX system peak pressure (500psi working load)
- Relief pressure 2000 psi
- MAX current draw = 50 amps
- Typical current draw = ~3 amps
- Purple ignition wire MAX current draw = 1 amp

SeaStar PRO power assist, 12/24V

- 12/24 Volts (automatically recognized)
- 1500psi MAX System peak pressure (500psi working load)
- Relief pressure 2000 psi
- MAX current draw = 50 amps
- Typical current draw = ~3 amps
- Purple ignition wire MAX current draw = 1 amp

Figure 6-3.

PART #	HARNESS LENGTH (feet)	VOLTAGE (auto recognized)
PA1200-2	15'	12/24 Volt
PA1200-2HP*	15'	12/24 Volt
PA1206	6'	12/24 Volt
PA1220-2	20'	12/24 Volt
PA1225-2	25'	12/24 Volt
PA1315-2	15'	12/24 Volt

Table 6-1 * High pressure, recommended for all DF300/DF350 dual prop and high steering load applications.

NOTICE!

SeaStar power assist PA1200-2HP requires EPS fluid.
Part # HA5482 (1 US quart).

NOTICE!

Use SeaStar PRO power assist with a SeaStar PRO helm for best performance on Bass boats.

6.2 SeaStar power assist autopilot

Converts manual hydraulic steering for dramatic reduction in steering wheel torque and at the same time provides a pump for an autopilot installation.

The SeaStar power assist autopilot pump is the standard power assist product with the addition of a type 1 or type 2 autopilot pump. The SeaStar autopilot pump is a fixed flow, reversible pump set that uses an internal hydraulic gear pump, producing very little vibration or noise. It is offered in 12 and 24 volt configurations, as well as two different pump sizes (type 1 and type 2).

Figure 6-4.

Figure 6-5.

Features

- Autopilot ready – a single installation (i.e. no need to break into system for install of pump)
- Converts manual hydraulic steering to power steering
- Dramatic reduction in steering wheel torque
- Easy installation
- OEM or Retrofit
- Simple add on to an existing SeaStar manual system
- Use all 1.4 – 2.4 regular SeaStar helm pumps
- Compatible with power purge system
- Ignition protected (SAE J-1171)
- ABYC, CE, NMMA, ISO 10592 Approved
- Replaces other 12 & 24 volt systems

6.2.1 Order guide

SeaStar P/A unit complete with pilot pump

DESCRIPTION	PART #
Standard SPA Plus type 1 12V pump	PA6010
Standard SPA Plus type 2 12V pump	PA6020

6.2.3 Technical data

Figure 6-5.

6.3 SeaStar autopilot pump

Part # AP1219, AP1233, AP2419, AP2433

The SeaStar autopilot pump is a fixed flow, reversible type set that uses an internal hydraulic gear pump, producing very little vibration or noise. It is offered in 12 and 24 volt configurations, as well as two different pump sizes (type 1 and type 2). It can be used as a stand alone pilot pump or can be mounted to a previously installed SeaStar power assist unit and can prevent the need to break into the hydraulic lines.

Figure 6-6.

Figure 6-7.

Features

- Long life DC Motor
- Compact design
- Simplified installation
- Low power consumption
- ABYC, CE and J1171 compliant
- Superior corrosion resistance
- Quiet operation
- Mounting bracket included
- Stand alone or mounts to SeaStar power assist unit
- Replaces other 12 & 24 volt pumps

6.3.1 Order guide

DESCRIPTION	PART #
Type 1: 12V – 60 cu.in/min	AP1219
Type 2: 12V – 100 cu.in/min	AP1233
Type 1: 24V – 60 cu.in/min	AP2419
Type 2: 24V – 100 cu.in/min	AP2433

Table 6-4.

NOTE

Retrofit kit part # HA1205 will be required to mount to a PA1200-2 power assist pump.

6.3.2 Specifications

Voltage	12 or 24 Volts
Fittings	Compatible with standard SeaStar hoses (HO51XX, HO57XX, etc.)
Wire length	24"
Wire gauge	12 awg
Connector	None — bare leads
Oil compatibility	SeaStar steering fluid
Weight	4.9 lbs (2.2 Kg)
Autopilot pump sizes	Type 1: 60 in ³ /min (no-load) Type 2: 100 in ³ /min (no-load)
Maximum pressure	1000 psi
Typical current draw (depending on application)	12V Type 1: 4 — 8 amps 12V Type 2: 5 — 11 amps 24V Type 1: 2 — 4 amps 24V Type 2: 3 — 6 amps
Autopilot pump cylinder capacity	Type 1: 4.9 in ³ — 12.5 in ³ Type 2: 12.5 in ³ — 21.0 in ³

Table 6-5.

6.3.3 Technical data

Figure 6-8.

6.4 SeaStar SmartStick

Part # AR4502RM, AR4502SI, AR4502

SmartStick is a non-contact autopilot position sensor that mounts to SeaStar outboard front mount cylinders (HC5345-3, HC5358-3*, HC5375-3).

These SmartStick models replace the previous generation AR4102 and AR4202 models. There are three SmartStick models available.

A retrofit kit (HP6014) for non-3 cylinders to adapt to new SmartStick models is also available.

Figure 6-9.

* HC5358-3 must be installed on Yamaha and Evinrude engines with AR4502 series SmartSticks to ensure adequate clearance. Installing AR4502 series with HC5345-3 on Yamaha and Evinrude outboards may result in interference between the sensor and the cylinder.

6.4.1 Applications

- Non-contact sensing — no moving parts to wear
- Convenient installation — no linkages or external parts to mount
- Electrical components sealed in potting — corrosion resistant

6.4.2 SmartStick enhancements

- No external black box — electronics integrated into sensor body, making cable easy to route through rigging with no splicing
- 35' of cable can be trimmed to any length and jacket is labeled
- Digital electronics are more immune to electromagnetic interference (EMI) — cleaner signal allows autopilot to perform better
- Installation of sensor is more convenient and faster
- Part Numbers are autopilot specific, no jumpers to cut
- Lower cost

6.4.3 Order guide

DESCRIPTION	OUTPUT	PART #
Ray Marine installations only	2.2V — 2.8V	AR4502RM
Simrad AP20 installations only	2.8kHz — 4.0kHz	AR4502SI
Generic installations	0.5V — 4.5V	AR4502

Table 6-6.

6.4.5 Specifications

AR4502 SERIES	
Range	8.0"
Resolution	0.012"
Linearity	0.048"
Repeatability	0.024"
Environmental resistance	<ul style="list-style-type: none">• Salt spray 1000 hours• IEC IP67 (submersible to 1m)• Immune to dirt, oil, SAE fluids• Thermal shock and vibration resistant (MIL-STD810F)

Table 6-7.

7 Outboard Engine Position Control

7.1 SeaStar Gen2 jackplates

Features

- Utilizing high strength materials the SeaStar Xtreme jackplates are easily capable of handling up to 400 HP engines
- The standard SeaStar Jackplates are capable of handling up to 300 HP engines
- Rapid hydraulic response in 8.5 seconds — 5.6" of movement
- Complete rigid engine support at full thrust
- Easily moves engine up or down at full thrust
- Composite bushings ensure smooth operation
- Easy wrench access to engine bolts from side
- Compatible with Power Pole® and Talon®

Actuator kit, 7/16" mount bolt, 3/8" socket	DK4720***
SeaStar stabilizer clips, (pack of 2)	HYCL-001
Transom plate, small, 2" x 15"	18-79987
Transom plate, large, 4" x 17"	18-79988
Anode — all water types	DK4850

Table 7-4.

* Included with Jackplate harness.

** Used on Jackplates with serial numbers D4000-00001 to D4000-001843.

*** Used on Jackplates with serial numbers above D4000-001843 and any Jackplate serial number starting with JPXXXX.

7.1.5 Engine lift per setback

With jackplates in fully lowered position there is a prebuilt lift of 2.657" from top transom bolts to top engine bolts. On a 12° transom, the actual engine lift to water level changes as a function of a setback. See figure 7-3 below.

Example: Engine lift is 0" to horizontal on a 12" setback when placed on 12° transom.

Figure 7-3.

7.2 SeaStar Mega jackplates

Dometic’s Mega jackplate has been developed to withstand the power of high performance engines and provide boaters with the ability to maximize the output of their engines while offering more flexibility in shallow water. The Mega jackplate is rated to 600 HP and is an extension of existing product line.

Figure 7-4.

Mega jackplate — a meticulously engineered and robustly built electric jackplate system designed for today’s large, heavy and powerful outboard motors. It is offered in 6.5”, 8” and 10” setbacks. There will be 2 versions available, a standard bolt pattern designed to fit engines like Yamaha XTO and a wide bolt pattern designed to fit Mercury 500/600HP.

7.2.1 Benefits of Mega jackplate

- Rated up to 600HP
- Can fit all outboard engines on the market
- Rigorously designed and tested for high impact and cyclic loads
- Comes with corrosion protection anodes
- Built in linear position sensor easily integrates with Dometic digital switching

Table 7-6.

Figure 7-5. Standard (OMC) Mega jackplate

Figure 7-6. Wide (Mercury) Mega jackplate

7.2.4 Engine lift per setback — Standard Mega jackplate

With jackplate in fully lowered position there is a prebuilt lift of 2.7" from the top transom bolts to top engine bolts. On a 12° transom, the actual engine lift to water level changes as a function of a setback. See figure 7-7 below.

Example: Engine lift is 0.590" to horizontal on a 10" setback when placed on 12° transom.

Figure 7-7. Engine lift per setback — Standard (OMC) Mega jackplate. Not to scale.

WARNING!

Always use the 6 sets of mounting hardware for installation of a standard or wide SeaStar Mega Jackplate to the transom. Follow engine manufacturer's guide for installation of outboard engines.

7.2.5 Engine lift per setback — Wide Mega jackplate

With jackplate in fully lowered position there is a prebuilt lift of 1.5" from the top transom bolts to top engine bolts. On a 12° transom, the actual engine lift to water level changes as a function of a setback. See figure 7-8 below.

Example: Engine lift is -0.610" to horizontal on a 10" setback when placed on 12° transom.

Figure 7-8. Engine lift per setback — Wide (Mercury) Mega jackplate. Not to scale.

NOTICE!

For standard or wide Mega Jackplate to transom connections use:

- Stainless steel outboard engine bolts supplied by or approved by the engine manufacturer.
- Stainless steel washers supplied by or approved by the engine manufacturer.
- Stainless steel nuts with nylon locking elements supplied by or approved by the engine manufacturer.

7.2.6 Parts included in kit

WARNING!

Use the engine manufacturer's recommend fasteners to mount the engine to the Mega Jackplate.

WARNING!

If the outboard engine manufacturer has supplied installation instructions, those guidelines must be followed during installation.

NOTICE!

The use of a transom stiffener for the top bolts on the transom side of the jackplate-to-transom connection is recommended.

WARNING!

Check the outboard engine manufacturer's instructions carefully for specifications regarding connection hardware. Ensure the outboard engine manufacturer's requirements are followed.

NOTICE!

Refer to ABYC TH-12 standard "Transom crushing at bolt location" for guidelines on mounting the Jackplate to the transom.

The following parts are included with your Mega Jackplate product. If any of these components are missing, contact your dealer or Dometic.

1. SeaStar Mega jackplate

2. Relay Wiring Harness

3. Spade Terminals (Female)

4. Rocker Switch

5. Gauge Kit

Figure 7-9. Included parts.

7.3 Interact Drive engine position controller

Interact Drive (formerly known as ProTap) offers the ultimate in outboard engine position control

- Gets your boat to max speed at the touch of a button
- Memorizes Jackplate and engine trim positions
- Provides fine Jackplate and engine trim adjustment
- Synchronizes 2 Jackplates with each other
- Provides 0–5V Jackplate height signal
- Provides engine tilt protection

Features

- Get to max. speed faster with Interact Drive controller in bay/bass mode
- Experience fast shallow water reaction time with Interact Drive controller in flats mode
- Engine tilt protection
- Syncs two jackplates

Table 7-6.

7.3.2 B-Mode # JC4010

This mode is designed to get the boat quickly up to speed by quickly getting the jackplate and engine trim to the pre-memorized setting set by the user.

- Two memory presets: Memorize your favorite Jackplate or engine trim positions by holding the switch up or down for more than 5 seconds.
- Two memory recall: Quickly transition to your memorized position by holding the Jackplate or engine trim switch up or down for 1–5 seconds.
- Bump mode: Tap the Jackplate or engine trim switch up or down and the plate will move in 1/4" increments while engine trim moves in 1/20 of trim range increments.
- Bump memory: Sequential taps on the switch will be memorized for a continuous jackplate or engine trim movement.

8 Hydraulic Helms and Technical Information

8.1 SeaStar helms

The SeaStar helm pump is the heart of the hydraulic steering system.

SeaStar helm pumps are the product of many years of research and experience by the world's foremost builder of manual hydraulic steering systems. Our efforts have resulted in a design which represents the ultimate in efficiency, safety and reliability, yet is easy to install and maintain. Superior design, teamed with the finest materials, precision manufacturing and rigid quality control all add up to an outstanding product which is certain to set industry standards for years to come.

Front mount helm features

- Compact, stylish design.
- Available in 1.4, 1.7, 2.0, 2.4 and 3.0 cubic inch displacements.
- Convenient front of dash fill.
- Small 3.0" hole cutout on dash.
- Can be retrofitted into old SeaStar 4.5" hole cutout.
- Complete with elbow fittings.

Front mount

Rear mount helm features

- Behind dash mounting configuration.
- Available 1.4, 1.7, 2.0, 2.4 and 3.0 cubic inch displacements.
- Remote fill point.
- Complete with elbow fittings.
- 1-1/16" hole required.

Rear mount

Sport/Sport Plus tilt helm features

- 5 wheel positions allow adjustment to most comfortable steering position.
- 48° tilt range (12° down – 36° up).
- Available in 1.4, 1.7, 2.0 and 2.4 cubic inch displacements.
- Remote fill point.
- Complete with elbow fittings.
- Comes with newly designed tilt mechanism.
- 3" dash cutout.

Sport Plus tilt

Sport tilt

Classic tilt helm features

- 5 wheel positions allow adjustment to most comfortable steering position.
- 48° tilt range (18° down – 30° up).
- Available in 1.4, 1.7, 2.0 and 2.4 cubic inch displacements.
- Convenient front of dash fill.
- Complete with elbow fittings.
- 4.5" hole cutout.

Classic tilt

8.1.1 Features of SeaStar helm pumps

1. Helm rotor supported by three roller bearings.
2. Ball bearing piston race.
3. Field replaceable shaft seal.
4. -5 ORB ports.
5. Built-in lock valve for positive rudder lock.
6. Patented bleed tubes.
7. Patented internal air pocket eliminates steering fluid expansion overflow.
8. Integral relief valve.

Figure 8-1.

NOTE

Illustration is not intended to assist in the repair of a helm pump. Any repair to a hydraulic steering system must be completed by an authorized repair center. Refer to Section 15 for authorized repair centers.

Commercial helms — part # HH5217-3, HH5218-3, HH5224-3, HH5225-3

Specifically designed to be used on smaller fishing vessels involved in the lobster and crabbing Industries. The commercial helm pumps are designed with a stainless steel shaft and heavy duty shaft seal and wiper. This new shaft and seal help protect the helm pump from the abrasive effects of sediment that is brought on board by the operator handling traps or pots.

NOTE

For commercial use.

Figure 8-2.

8.1.2 Accessories

Backplate kit — part # HA5418

- Used to retrofit a new SeaStar standard helm in the old 4.5" (115 mm) diameter hole, or
- reduce the helm protrusion from the dash by the thickness of the dash, or
- retrofit new SeaStar standard helm into hole cutouts for mechanical and hydraulic steering as per chart.

8.1.6 Capilano helms: 1250V HH5250 (1.7–3.4 cu. in.) 1275V HH5275 (2.7–5.4 cu. in.)

A unique variable displacement feature on these helms allows the number of steering wheel turns to be adjusted by the helms-person to their preference within a predetermined range.

Recommended wheel size for 1250V (HH5250) is between 20" and 36".

Recommended wheel size for 1275V (HH5275) is between 26" and 36".

Figure 8-13.

8.2 Tools including Power Purge Jr.

8.2.1 SeaStar Power Purge Jr. part # HA5445-2

SeaStar/BayStar Power Purge Jr. is the quickest way to bleed a SeaStar/BayStar system in the field and assure a rock-solid steering feel every time!

The Power Purge Jr. reduces installation and warranty costs while enhancing the quality of the boat to the end user. A typical manual fill and purge takes the average experienced installer or service technician about 30 minutes per boat — by using the Power Purge Jr. this can be reduced to 10 minutes or less.

Figure 8-14. Power Purge Jr. HA5445-2.

Advantages

- Steering feel is solid every time
- Complete Fill & Purge in 10 minutes or less
- Fast and efficient
- Easy to operate
- Screens large contaminants from steering fluid
- Quick connect fittings
- Convenient portable size
- Convenient electrical hook-up utilizing 12 volt boat battery
- Optional Dual Cylinder Purging Kit HA5461 available
- Optional 50' Hose Extension Kit HA5462, for longer runs

Figure 8-15. Dual cylinder purge kit HA5461.

NOTICE!

Larger SeaStar Power Purge Sr. also available for high volume users, part # HA5447. Contact Dometic technical support for details.

8.2.X SeaStar hydraulic cylinder service kit part # HS5300

- This kit is designed for easier servicing of the hydraulic cylinder. A compact bleeder wrench simplifies access of hard to reach places. While the end gland wrench is conveniently adaptable to fit both 4-hole and 8-hole end glands. Specially designed for Dometic SeaStar steering systems, the kit includes bleeder wrench, end gland wrench pin and instruction sheet.

Figure 8-22.

8.2.2 SeaStar bleed hose part # HA5438

- This kit is needed to properly bleed the SeaStar outboard steering kit
- Screws onto the SeaStar and equivalent fluid to bleed the SeaStar system
- Makes for a clean bleed when used properly

Figure 8-23.

8.2.2 SeaStar remote fill part # HA6450

- Can be used with all SeaStar Helm pumps
- Relocate your fill plug to a more convenient or hidden place

Figure 8-24.

NOTICE!

Requires 7/8" hole to be drilled onto dash above helm pump.

8.3 Technical info/specifications

NOTICE!

Contact your nearest dealer or distributor to order replacement parts.

8.3.1 BayStar/SeaStar helm pump shaft details

Taper: 3/4" standard taper (1" per foot), wheel shaft threads: 5/8"-18 UNF, Key: #606 woodruff key (3/16"), port sizes: -5 ORB Hose (F).

NOTICE!

Theoretical torque about pivot point at 35° rudder arc with 1000 psi (70 bar) system pressure.

Rudder drawing included:..... Yes
 (See notice below left.)

Print/scan completed form and a detailed dimensioned rudder drawing.
 email to: **seastar@dometic.com**
 or, fax to: **604-270-7172**

Figure 8-25.

NOTE

See reverse side (page 8-20) for important Warning and Notice.

**WARNING! SAIL BOATS**

Dometic's expected rudder torque calculations are not suitable for sail boat applications. Please contact a naval architect for loads to determine expected maximum torque about rudder post.

**NOTICE!**

Please include a detailed dimensioned rudder drawing including the location of the rudder post. This must be provided to get a steering system recommendation.

9 SeaStar Hydraulic Fluid

WARNING!

Any non-approved fluid may cause serious damage to the steering system resulting in possible loss of steering, causing property damage, personal injury and/or death.

Figure 9-1. HA5430-1L, HA5440-1G, HA5458-5G

Due to recent upgrades in our steering system components, Dometic recommends use of SeaStar steering fluid only in our hydraulic steering systems. Dometic steering systems have been engineered and validated using our proprietary SeaStar hydraulic steering fluid. SeaStar steering fluid is engineered with a special additive package that contains anti-foaming and anti-rusting agents, anti-oxidants, viscosity stabilizers, corrosion inhibitors, wear additives as well as water emulsification additives. It is highly recommended that SeaStar steering fluid be used to ensure optimum system performance and safety.

Use of any non-approved fluid may result in the following;

- Higher steering effort, particularly at ambient or lower temperatures and/or over time due to steering fluid degradation and breakdown.
- Increased steering slip and/or drift resulting in lost motion.
- Foaming or air entrapment causing a bumpy feel during steering.
- High rates of moisture absorption causing internal component corrosion.
- Scratched steering cylinder bores and shafts due to contamination or elevated wear rates.
- Seal degradation — incompatibility with various proprietary seal compounds used in our products.

Figure 9-2. Optional filler kit part# HA5438.

In an emergency, SeaStar EPS fluid, any MD-3/4 rated ATF or MIL-PRF-5606H equivalent fluid that is filtered through a fine mesh screen can be used. The system must be thoroughly flushed as soon as possible with genuine SeaStar steering fluid after using an emergency fluid.

In an extreme emergency, any non-toxic, non-flammable fluid that is filtered through a fine mesh screen may provide temporary steering.

WARNING!

Use of non-standard fluids will require an immediate and complete system flush using approved fluids, by an approved steering technician.

WARNING!

Never fill or mix brake fluids, triglycerides or polyalkylene glycols within a hydraulic steering system.

NOTICE!

SeaStar hydraulic steering fluid can be used in Hynautic, BayStar and BayStar Plus steering systems.

NOTICE!

Help protect your boating environment by ensuring that all used steering fluid is disposed of properly.

10 Hose and Fittings

10.1 SeaStar hose/tube

SeaStar Steering hoses are a custom multi-layered composite design, engineered specifically for our systems. They are designed to exceed SAE and ABYC specifications and provide precise steering control not achievable with hydraulic industry standard hoses.

SeaStar Hoses are engineered to provide the system with very low thermal expansion properties and are kink and abrasion resistant. Our hoses also feature a swaged solid fitting connection with an O-ring seal and a metal to metal backup to the primary seal.

Due to performance and safety concerns, SeaStar Solutions recommends that only SeaStar or SeaStar PRO steering hoses be used in SeaStar Steering Systems. It is recommended for hose lengths over 30ft that SeaStar PRO hose is used.

Tubing/hose

The tubing or hose requirements depend on the type of steering system being considered. Please double check the application in which you are using as in some cases nylon or copper tube is not to be used.

WARNING!

Do not cut outboard hydraulic hose.

APPLICATION	TUBING/HOSE REQ.	PAGE #
Outboards, inboards, SeaStar power assist, or sterndrive cylinder # HC5332	Outboard Hose	Page 10-5

Table 10-1.

CAUTION!

Do not use nylon tubing in outboard and/or power assist steering applications.

General considerations

In most hydraulic steering installations the cylinder body moves as the motor, outdrive or tiller arm is articulated. Provide sufficient hose length to allow full-uninterrupted steering motion including trim and tilt. If your splashwell is rated for a dual engine application or you are mounting the engines on a gill bracket you must provide enough steering hose to rig either twin or single engines. Inboard or sterndrive steering installations that use 3/8" copper or extruded nylon tube must have a swaged hydraulic hose kit (# HF5508) between the steering cylinder and the rigid tube to provide a flexible connection.

WARNING!

Do not use extruded nylon tubing with SeaStar outboard cylinder, HC5332, sterndrive cylinders and/or SeaStar power assist applications.

10.2 SeaStar hose

WARNING!

SeaStar PRO helm systems require the use of SeaStar PRO (1500 psi) reinforced Kevlar hoses only.

SeaStar and SeaStar PRO steering hoses are available in kits (two, equal lengths of hose per kit). Before ordering you must consider the following areas to ensure that you order the correct length for the cleanest installation. In all applications, hydraulic hose/tubing should be secured along the routing path where possible and should not be allowed to hang free in any area where they may become a safety hazard. Dometic recommends the use of a rigging tube, PVC piping or conduit for the safe installation and protection of the steering hose/tube. Do not install hoses in such a way that they become exposed to high heat areas such as engine components (i.e. manifolds or exhaust components), or in highly corrosive areas such as battery fumes or electrical connections. Each part number contains two hoses of equal length.

SeaStar Solutions offers two different types of steering hoses;

- Standard (straight line hoses, not passing through bulkheads) from 2' to 5' (1' increments), 6' to 30' (2' increments), both SeaStar standard and SeaStar PRO available.
- Bulkhead hoses (for use where the hose is required to pass through a bulkhead). Available from 2' to 5' (1' increments) 6' to 30' (2' increments), both SeaStar standard and SeaStar PRO available.

NOTICE!

SeaStar bulkhead hoses provide the cleanest hose routing through the splashwell or transom.

10.2.1 Field installed bulkhead fitting kits

Dometic field installed bulkhead fitting kits are available in for either single or dual hose applications.

Offering boaters a simple solution to cleanly route hoses through the hull while maintaining safety and aesthetics.

PART #	DESCRIPTION
HO7100	Field installed bulkhead, single hose, pair, stainless bezels
HO7105	Field installed bulkhead, single hose, pair, plastic mounts
HO7200	Field installed bulkhead, dual hose, stainless bezel
HO7205	Field installed bulkhead, dual hose, plastic mount

Table 10-2.

- Split grommet design allows for easy installation onto a hose assembly.
- Split pigtail with snap fit tabs provides positive feel.
- Increased inner diameter of plastic base plate allows crimped hose fitting to pass through the base plate.
- Stainless steel cover plates are available for both single and dual applications, providing cleaner styling and corrosion resistance while blending in with the boat's stainless trim.

Figure 10-1. Easy to install.

Figure 10-5.

10.2.2 Bulkhead hose kits

Figure 10-6. HO88XX dual polished plate shown.

10.2.3 How to order SeaStar hose kits

Each part number contains two hoses of equal length.

PART #	KIT DESCRIPTION
* HO51XX	SeaStar standard outboard hose kit (2 hoses)
* HO57XX	SeaStar PRO hose Kit (2 hoses)
** HO81XX	SeaStar bulkhead hose kit, standard (2 hoses)
** HO82XX	SeaStar bulkhead hose kit, PRO (2 hoses)
** HO86XX	SeaStar bulkhead hose kit, polished plate (2 hoses)
** HO87XX	SeaStar PRO bulkhead hose kit, polished plate (2 hoses)
** HO88XX	SeaStar bulkhead hose kit, polished plate double (2 hoses)
** HO89XX	SeaStar PRO bulkhead hose kit, polished plate double (2 hoses)

Table 10-3.

* SeaStar standard and PRO hose kits are available in lengths from 2' – 30'.

** SeaStar standard and PRO bulkhead hose kits are available in lengths from 4' – 30'.

XX = Substitute length required in feet. 2–8 feet, in 1 foot increments. 8–32 feet, in even numbers.

NOTICE!

Outboard hoses are supplied with pre-attached hose fittings on both ends. In order to prevent hose kinking, bend restrictors are supplied on one end of each hose in the kit. The end of the hose with the bend restrictor is to be attached to the cylinder.

Figure 10-7. Standard hose kit.

10.2.4 How to measure hoses; single station, single cylinder, no bulkhead

NOTICE!

Correct hose length is crucial to the operation of your SeaStar steering system, please be sure that you take all the following measurements correctly to avoid damage to the steering hose.

Helm to steering cylinder. Using the illustrations below:

1. Measure from center of steering wheel to the starboard side wall.
2. Measure the intended path of the hoses from the starboard side wall to the center of the engine.
3. Round up the measurement to the nearest 'even' number and add 2 feet (0.6m). This is the length of hose kit required.
4. Order hose kit part no. HO51XX (item 1). The last two digits correspond to the length of hose.

Figure A. Single front mount cylinder

Note: cylinder body moves.

Figure B. Single side mount cylinder

Note: cylinder body stationary.

Figure C. Single splashwell mount cylinder

Note: cylinder body stationary.

Figure 10-8.

10.2.5 How to measure hoses; single station, dual cylinders, no bulkhead

Helm to hose tee fittings. Using the illustrations below:

1. Measure from center of steering wheel to the starboard side wall.
2. Measure from the starboard side wall to the transom.
3. Measure from the transom to your hose tee fittings (item 6).
4. Round up the measurement to the nearest 'even' number. This is the length of hose kit required.
5. Order hose kit part no. HO51XX (item 1). The last two digits correspond to the length of hose.

Hose tee fittings to steering cylinders. Using the illustrations below:

1. Measure the intended path of the hoses from the tee fitting (item 6) to the center of the port side engine.
2. Round up the measurement to the nearest 'even' number and add 2 feet (0.6m). This is the length of the hose kit required.

- Order hose kits part no. HO51XX (items 2 and 3). The last two digits correspond to the length of hose.

Figure D. Dual front mount cylinders

Note: cylinder body moves.

Figure E. Dual side mount cylinders

Note: cylinder body stationary.

Figure 10-9.

NOTICE!

This configuration also requires the purchase of Tee fitting kit # HF5530.

10.2.6 How to measure hoses; single station, single cylinder, with bulkhead

Helm to steering cylinder. Using the illustrations below:

- Measure from center of steering wheel to the starboard side wall.
- Measure the intended path of the hoses from the starboard side wall to the center of the engine.
- Round up the measurement to the nearest 'even' number and add 2 feet (0.6m). This is the length of the bulkhead hose kit required.
- Refer to table 10-3 on page 10-5 to select a style of hose kit (item 4). The last two digits correspond to the length of hose.

Figure F. Single front mount cylinder

Note: cylinder body moves.

Figure G. Single side mount cylinder

Note: cylinder body stationary.

Figure 10-10.

10.2.7 How to measure hoses; single station, dual cylinders, with bulkhead

Helm to hose tee fittings. Using the illustrations below:

1. Measure from center of steering wheel to the starboard side wall.
2. Measure from the starboard side wall to the transom.
3. Measure from the transom to your hose tee fittings (item 6).
4. Round up the measurement to the nearest 'even' number. This is the length of hose kit required.
5. Order hose kit part no. HO51XX (item 1). The last two digits correspond to the length of hose.

Hose tee fittings to steering cylinders. Using the illustrations below:

1. Measure the intended path of the hoses from the tee fitting (item 6) to the center of the PORT side engine.
2. Round up the measurement to the nearest 'even' number and add 2 feet (0.6m). This is the length of hose kit required.
3. Order bulkhead hose kits part no. HO81xx (items 4 and 5). The last two digits correspond to the length of hose.

Figure H. Dual front mount cylinders

Figure I. Dual side mount cylinders

Note: cylinder body moves.

Note: cylinder body stationary.

Figure 10-11.

NOTICE!

This configuration also requires the purchase of Tee fitting kit # HF5530.

10.2.8 Part numbers for figures A, B, C, D, E, F, G, H, and I

ITEM #	PART #	DESCRIPTION
1	HO51XX	Hose kit
2	HO51XX	Hose kit
3	HO51XX	Hose kit
4	HO81XX	Bulkhead hose kit (see Section 10.2 , and 10.3)
5	HO81XX	Bulkhead hose kit (see Section 10.2 , and 10.3)
6	HF5530	Tee fitting kit (3 per kit)

Table 10-4.

NOTICE!

See section 10.5 'Fittings and Fitting Kits' for add a station and/or autopilot fitting kits.

10.3 Additional stations or autopilot integration

10.3.1 Additional steering station or autopilot power pack

1. Determine the location of the 2nd station or power pack.
2. Measure along the intended path of the hose routing from the upper helm pump to the 2nd station or autopilot power pack.
3. Round up the measurement to the next even digit. This is the length of hose kit required.
4. Order hose kit(s) part number HO51XX the last two digits correspond to the length of hose.

NOTICE!

- a) All hoses should be routed with a gradual rise so that air will not be trapped in the lower station.
- b) Some installations require more than 1 hose kit and additional fitting kits.
- c) Minimum bend radius for hose is 2-1/2" (6 cm).
- d) A compensating line is required between helm stations or the helm and autopilot power pack.

WARNING!

Do not cut hydraulic hose.

Figure J. 2nd steering station or autopilot power pack installation

Figure 10-12.

Parts list for figure J

ITEM #	PART #	DESCRIPTION	QTY. REQ.
1	HO51XX	Hose kit	1
2	HF6007	Fitting kit* (For use with -3 helms only)	1

Table 10-5. *Includes 25' of 3/8" dia. nylon tubing to be used for the compensating line only.

NOTICE!

For NPT helm pumps use kit # HF5501.

10.4 SeaStar inboard/sterndrive tubing

Two types of tubing materials are available for plumbing inboards and sterndrives.

1. SeaStar 3/8" outside diameter nylon tubing
2. 3/8" outside diameter copper refrigeration tubing

SeaStar hoses provide 20% less effort over tubing.

10.4.1 Nylon tubing

SeaStar 3/8" outside diameter nylon tubing can be used for;

- a) Inboard,
- b) Sterndrive, and
- c) SeaStar steering systems with SeaStar (1.7 cubic inch/rev. displacement) helms only.

SeaStar 3/8" outside diameter nylon tubing is available in the following lengths:

LENGTH		TUBING PART #
FEET	(METERS)	
25'	(7.6 m)	HT5092
50'	(16.2 m)	HT5095
75'	(22.8 m)	HT5097
100'	(30.5 m)	HT5100
1000'	(305.0 m)	HT5101

Table 10-6.

NOTICE!

SeaStar 3/8" extruded nylon is not recommended for use in systems with SeaStar 2.4 or SeaStar PRO helm pumps. It is also not to be used in systems where total tubing runs exceed 100', in these cases SeaStar hoses and/or 3/8" copper tubing must be used.

WARNING!

Dometic recommends the use of SeaStar PRO (1500 psi) reinforced Kevlar hoses with SeaStar PRO helm systems.

10.4.2 Copper tubing

3/8" outside diameter copper tubing is recommended for;

- a) inboard,
- b) sterndrive, and
- c) SeaStar steering systems with SeaStar (2.4 cubic inch/rev. displacement) helms only, or where the length of tubing run exceeds 100 ft. (30.5 m).

Additional SeaStar hose kit part number HF5508 is required to connect the tubing to the cylinder.

3/8" copper tubing should be obtained through a local vendor based on the following tubing specifications.

Specification for copper tubing:

Soft annealed copper tubing, type 'L' produced under ASTM B280.

10.4.3 Determining the required length of tubing for single station configurations

From the illustrations (figures A and B), select the situation which best suits your application and note;

- a) the type of drive system, and
- b) the number of steering stations.

Single station

1. From the illustration which best suits your application note the number of lengths of tubing and fitting kits required.
2. Measure along the intended path of tube routing for each of the tubing runs.
3. Determine if 3/8" nylon tube can be used or if copper tubing is required based on lengths of tubing runs required.
4. Total up the entire length of tubing required and round up to the next available tube kit length.

Figure A. Single inboard cylinder. Fittings required supplied with helm and cylinder.

HF6005 Tee fitting

ORB, -3 cylinders/helms ONLY.

HF6006 Tee fitting

ORB, -3 cylinders/helms ONLY.

HF6009 Straight fitting

ORB, -3 cylinders/helms ONLY.

HF6011 45° fitting

ORB, -3 cylinders/helms ONLY.

HF4203 Horizontal bleeder tee

ORB, -3 BayStar cylinder ONLY.

HF6012 -5 ORB (M) - 1/4 NPT (F)

ORB, -3 cylinders/helms ONLY.

HF6013 Horizontal Bleeder Tee

ORB, Mercury Verado ONLY.

HF6007 Fitting Kit

ORB, add autopilot or second station.

10.5.2 NPT fittings

All SeaStar manual hydraulic steering systems use the same style of fittings for all applications. These are 3/8" compression fittings which utilize a 9/16"-24 extra fine thread on the hose side of the fitting.

9/16"-24 EXTRA FINE THREAD

Figure 10-16. Typical NPT fitting.

CAUTION!

NPT fittings are not to be used in a -3 helm and/or cylinder (except HF5548). Doing so will result in irreparable damage to the helm/cylinder. Only use a SeaStar ORB hose fitting in a -3 helm and/or cylinder.

HF4202 Horiz. bleeder tee

(2 per kit) For use with BayStar cylinders only.

HF5518 Vertical bleeder tee

(2 per kit)

HF5519 Bleed tee (TM cyl.)

(2 per kit) 45° FLARE

HF5520 Horiz. bleeder tee

(2 per kit)

HF5521 Vertical bleeder tee

(2 per kit)

HF5548 Bleed nipple

(2 per kit inc. O-ring) For use with front fount cylinders only

HF5527 Union coupling

(3 per kit)

HF5528 Straight fitting

(3 per kit)

HF5532 Connector fitting

(3 per kit)

HF5529 Elbow fitting

(3 per kit)

HF6145 SS elbow fitting

(3 per kit) For use with front mount cylinder

HF5534 Elbow fitting

(3 per kit)

HF5538 Street elbow

(3 per kit)

HF5540 45° fitting

(3 per kit)

HF5533 Tee Fitting

(3 per kit)

HF5531 Tee Fitting

(3 per kit)

HF5530 Tee Fitting

(3 per kit)

HF5536 Tee Fitting

(3 per kit)

HF5566 Adapter Fitting

(2 per kit) 9/16"-18UNF JIC 37.5 FLARE

HF5524 Cap plug nut

(3 per kit)

HF5526 Tube nut

(6 per kit) For use with 3/8" nylon and/or 3/8" copper tubing.

HF6145 Hose fitting (pivot cyl.)

(2 per kit)

10.6 Additional SeaStar steering station or autopilot kit

1. Refer to illustration figure 10-17.
2. Determine the location of the second station or autopilot power pack.
3. Measure along the path of the tube routing from the upper helm pump to the second station or autopilot power pack. Multiply this length by three for the amount of tubing required.
4. Select the tubing kit based on the total system tubing requirement.

WARNING!

Do not cut SeaStar steering hose.

Figure 10-17.

ITEM #	PART #	DESCRIPTION	QTY. REQ.	SEC. REF.
1	HT5_---	3/8" Dia. nylon or copper tube	As measured	
2	HF6010	Fitting kit*	1	Section 10-5

Table 10-8. * For NPT helms use HF5502.

NOTICE!

- a) A compensating line is required between helm stations or the helm and autopilot power pack.
- b) All hoses should be routed with a gradual rise (particularly the compensating line) so that air will not be trapped in the lower helm station.
- c) The second helm station or autopilot power pack may be connected at any location between the upper helm station and the cylinder. For existing single station installations the nylon or copper tubing may be cut and the tee fittings installed at any convenient location.

Required details for the addition of an autopilot

1. SeaStar Helm pumps are fitted with a built in check valve which are required for installations of additional steering stations and/or autopilot pumps. If your helm pump is not fitted with an internal check valve an external valve will be required.
2. Autopilot mfg. requires the volume of your steering cylinder(s) to provide an adequate autopilot pump, refer to page 8-15 for cylinder specifications.

Outboard system fitting kit – part # HF6007

Application; add a 2nd station or autopilot to an outboard system.

CAUTION!

For use with -3 helms only. (For NPT helms use kit# HF5501.)

NOTE

HF6007 fitting kit is to be used when the system has been plumbed with SeaStar outboard steering hose only.

Figure 10-18.

ITEM #	PART #	DESCRIPTION	QTY. PER KIT
1	343196	Tee Fitting, 1 End = -5 ORB, 1 end = 3/8" tube, center = 3/8" tube	2
2A	343088	Connector fitting, -5ORB — 3/8" tube	2

3	280327	Tube nut, 3/8" dia.	6
4	HA5432	Non-vented filler plug	1
5	HT5092	SeaStar nylon tube, 3/8" dia.	25ft
A*		Elbow, 3/8" tube (m) — -5 ORB	2

Table 10-9. * Supplied with helm pump.

NOTICE!

Typical plumbing layout shown.

When using a SeaStar autopilot pump, always refer to the installation manual shipped with your autopilot pump.

Outboard system autopilot powerpack connection

MOST INBOARD OR STERNDRIVE SYSTEMS ARE NOT SUITABLE FOR USE WITH 2.4 HELMS OR LARGER, AND ARE NOT SUITABLE FOR USE WITH HC5332 CYLINDER.

Figure 10-19.

CAUTION!

Do not cut SeaStar steering hose. Once cut there is no means to field swage fittings to the ends of the hoses.

Inboard or sterndrive system fitting kit – part # HF6010

Application; fitting kit to add a 2nd station or autopilot to an inboard or sterndrive system.

CAUTION!

For use with -3 helms only. (For NPT helms use kit# HF5502.)

NOTE

Used in systems plumbed with 3/8" diameter nylon or copper tube.

NOTICE!

Typical plumbing layout shown.

When using a SeaStar autopilot pump, always refer to the installation manual shipped with your autopilot pump.

Figure 10-20.

ITEM #	PART #	DESCRIPTION	QTY. PER KIT

11 Electric Outboard Steering

Welcome to the world of electronic power steering. Please take a few minutes to familiarize yourself with the system overview and the first time operation sections. An understanding of the system will assure your safety and help you get the most enjoyment from your Optimus EPS steering system.

NOTE

Some products shown in this section are only available from an Optimus dealer please refer to www.dometic.com for more information and to find a dealer near you.

11.1 Optimus EPS — electro/hydraulic

11.1.1 Overview

Optimus EPS is a steer-by-wire system that replaces a traditional hydraulic helm with an electronic helm that communicates over a serial data network. This state-of-the-art system incorporates many advanced features to make it safe and reliable. These features include redundant sensors, fault-tolerant communications, extensive self-monitoring, and fault communications to notify and advise the operator in case of a system fault.

The Optimus EPS system consists of several major components, listed below. Refer to figure 11-1 through figure 11-4 to see these components in a schematic system diagram.

Electronic helm

The helm converts steering wheel movement into digital messages that are sent over the network to the pump control module (PCM). A system of friction plates in the helm allow the steering effort to be adjusted according to a set-point received from the PCM. (A steering wheel is not included with the Optimus EPS system.)

CANtrak display

The CANtrak display is a small color LCD that displays system status and fault information to the operator. It can also be used to make changes to user-adjustable steering settings, such as helm effort and number of turns, when enabled by the boat builder or dealer.

Dash panel

Standard on single-engine outboard systems, the dash panel has an LED to indicate system status and a pushbutton for alarm acknowledgment.

Pump control module (PCM)

The PCM receives wheel movement messages from the helm(s) and operates the hydraulic steering pumps to steer the vessel as required. The PCM uses position feedback from the SmartCylinders for precise steering control and fault detection. The PCM can also respond to inputs from a certified autopilot system.

Power steering pumps

The power steering pumps supply pressurized fluid to the SmartCylinders in order to steer the boat. The PCM controls a 12V DC motor that drives a small gear pump. The pump assembly has an integral fluid reservoir and pressure relief valves.

The steering pumps have an integral service valve that can be opened to bypass the pumps and allow the engines to be manually repositioned. They are used for service or in the case of an emergency.

SmartCylinders

The SmartCylinder is a hydraulic steering cylinder fitted with a magnet and a position sensor (RFU). Each SmartCylinder can steer a single outdrive, or up to two rudders or outboard engines connected with a tie-bar.

Remote-mounted steering service valves (optional)

When the service valves on the power steering pumps are not easily accessible these optional remote-mounted valves can be installed in a convenient location.

11.1.2 System diagrams

The figures on the following pages illustrate the Optimus EPS system schematically. Not every possible system configuration or cylinder type can be represented here, but these figures will illustrate the key components and connections.

Single-Engine Systems

Figure 11-1 illustrates a single-engine EPS system with the standard dash panel. Figure 11-2 shows the same system, but with the optional CANtrak display.

Multi-Engine Systems

Figure 11-3 and figure 11-4 illustrate a twin-engine EPS system with single and dual control stations, respectively. A triple- or quad-engine EPS system will have the same general arrangement, with the addition of tiebar(s) to steer the additional engine(s).

Figure 11-1. Optimus EPS electro/hydraulic system diagram, single station, single engine, with dash panel.

WARNING!

* The auxiliary power switch provides backup power to the steering system and should only be used in emergency situations. The dash panel warning lamp and buzzer are disabled when this switch is used.

Figure 11-2. Optimus EPS electro/hydraulic system diagram, single station, single engine, with optional CANtrak.

Figure 11-3. Optimus EPS electro/hydraulic system diagram, single station, twin engine.

Figure 11-4. Optimus EPS electro/hydraulic system diagram, dual station, twin engine.

MST — Mechanical Shift and Throttle Engines

EST — Electronic Shift and Throttle Engines

JS Upgrade — Can add joystick control to an existing Optimus EPS vessel

11.1.4 Electronic helm(s)

The steering wheel is attached to this unit, which may be located immediately under the wheel or just behind the dash panel. The images below show the available helm styles.

Figure 11-5. EPS helm configurations.

CAUTION!

Keep magnets away from the helm. They may interfere with proper helm operation.

11.1.5 Pump control module (PCM)

The PCM is located in a dry area and can usually be found inside the center console, in the area behind the dash, or in a compartment near the engines or batteries. The PCM is always located close to the steering pumps. There will be one PCM on most boats (except for some triple and quad engine configurations that use two PCMs).

Figure 11-6. Pump control module.

11.1.6 Hydraulic steering pump(s)

The hydraulic steering pump(s) supply pressurized fluid to the SmartCylinders to steer the engines, and are located near the PCM. They can usually be found in a compartment near the engines, the center console, or behind the dash.

There is one pump for each steering cylinder. The steering fluid reservoir is mounted directly to the pump; it is here that you will check the fluid level and add steering fluid as necessary.

Figure 11-7. Hydraulic pump and reservoir.

NOTE

These hydraulic steering pumps look similar to the trim pumps that tilt the engines. They can be distinguished by the integrated steering service valve.

11.1.7 SmartCylinder(s)

Outboards: mounted to the engine tilt tube just below the engine cowling.

Figure 11-8. Outboard SmartCylinder with sensor.

11.1.8 Steering service valve(s)

The steering service valves permit the bypass of the EPS system and allow the engines to be manually positioned. They should only be used in the event of an EPS system failure, in which case instructions will be given on the CANtrak (if so equipped).

The service valves are integrated into the power steering pumps. To open the valve, turn the knob fully counter-clockwise until it stops (about three turns). Turn the knob fully clockwise to close it. Turn just until you feel the valve contact the stop — do not use tools or over-tighten.

Some vessels may be fitted with remote service valves as shown in figure 11-9.

Figure 11-9. Remote steering service valve.

Figure 11-10. Service valve location.

WARNING!

Wear a coast guard-approved personal flotation device (PFD) when manually realigning engines.

11.1.9 CANtrak display

On all multi-engine systems (optional on single-engine systems) a color display at the main helm station shows system status and fault notifications. When enabled by the dealer or builder it can also be used to make adjustments to steering parameters. A CANtrak display may also be installed at additional helm stations.

The CANtrak display is supplied with a plastic cover to protect it from the weathering effects of sunlight. Remove and stow the cover before using the boat, and replace it when finished.

Figure 11-11. CANtrak display.

11.1.10 Dash panel (single-engine outboard vessels)

Single-engine outboard vessels may be equipped with a dash panel in place of the optional CANtrak display. System status and faults are indicated by a bi-color LED lamp and an audible buzzer. The button is used to mute alarms, re-activate steering after a recovered fault, and to cycle through five levels of brightness on the LED.

Figure 11-12. Dash panel.

WARNING!

Do not operate the vessel without a functioning CANtrak display or dash panel warning lamp.

11.2 Optimus EPS — electric actuator

11.2.1 Overview

Optimus EPS with electric actuator is the marine industry's first fully electric, retrofitable, steer-by-wire system for outboard engines. This premium system is engineered for simple installation, with fewer parts than our standard electro-hydraulic EPS, no hoses to route, and no hydraulic system to purge. With a list of extensive safety features including redundant communications, self-monitoring, and fault alerts, Optimus EPS with electric actuator will give you years of safe and reliable operation.

The system consists of the major components listed below. Figure 11-13 shows these components in a schematic system diagram.

Electric steering actuator and steering control unit (SCU)

The electric steering actuator is a state-of-the-art device that converts the rotation of a brushless DC motor into precise linear motion and position control. It mounts directly to the outboard motor in place of a conventional hydraulic steering cylinder.

The steering control unit (SCU), integrated with the actuator, receives wheel movement messages from the helm and controls the actuator to steer as required. The SCU manages CANbus communications between system components, synchronizes multiple actuators, and monitors rudder position. The SCU can also respond to inputs from the SeaWays autopilot, or from a certified third-party autopilot system. The SCU replaces the PCM used in the standard Optimus electro-hydraulic system.

Electronic helm

The helm converts steering wheel movement into digital messages that are sent over CAN1 to the SCU. A system of friction plates in the helm allow the steering effort to be adjusted according to a set-point received from the SCU. (A steering wheel is not included with the Optimus EPS system.)

CANtrak display

The CANtrak displays system status and fault information and enables the operator to make changes to user-adjustable steering settings (when so configured by the installer). It is also used to activate the optional SeaWays autopilot and SeaStation GPS anchoring features on boats with the Optimus 360 joystick control system. Authorized installers have access to additional menus with system setup and calibration tools.

CAN networks

CAN (controller area network) is a serial network protocol that is widely used in marine and automotive control systems. Each device (node) on the network can send and receive data using specially formatted messages. The ability to reliably communicate data between devices is what enables the steer-by-wire functionality of Optimus EPS.

Optimus EPS uses up to three independent CAN networks, designated CAN1, CAN2, and CAN3.

- CAN1 is a low-speed, fault-tolerant network with redundant power wiring. It is used for safety-critical communication between the helm and SCU.

- CAN2 is a high-speed network used to communicate with a third-party autopilot, and with a joystick and shift/throttle controls on an Optimus 360 joystick control system. Use of this network is optional on single-engine systems.
- CAN3 is a public network using the NMEA 2000 protocol. The Optimus system broadcasts public messages onto this network and monitors the network for engine RPM.

Figure 11-13. Optimus EPS electric actuator system diagram, single station, twin engine.

11.2.4 System specifications

Operating voltage	12V DC nominal (9V min/16V max per SAE J1455)
Current draw, average	8A per actuator
Current draw, peak operating	40A per actuator
Current draw, maximum	55A per actuator
Circuit breaker rating	60A per actuator (not supplied by Dometic)
Number of wheel turns	Variable from 3.5 to 8
Steering angle	Up to 30° in each direction

11.2.5 Actuator harnesses

The actuator harness, ordered separately from the actuator, is a bundle of three cables: two DC power supply cables and a communications cable with multiple pigtails.

Figure 11-15. Straight actuator harness, and 180° actuator harness.

The harness is available with different CAN1 lengths, and in straight and 180° connector styles, to suit your installation requirements. Not all parts of the harness are the same length; table 11-3 shows the length of each component of the harness. When determining which harness to order, consider:

- Two harness styles are available for the actuator in order to meet the minimum bend radius of the cables. The straight harness is for boats with tight clearance to the bottom of the splashwell and the 180° harness is for boats with tight clearance to the side of the splashwell. The splashwell clearance requirement for the two harness styles are shown in figure 11-16 and figure 11-17.
- The longer harnesses are designed for single-engine applications in which the helm station can be reached without extending the CAN1 harness.
- In multi-engine applications you will need to use a CAN1 hub or a Y-harness to join both CAN1 harnesses together at the aft of the boat. You may need to use different harness lengths for the port and starboard actuator if you locate the hub/Y-harness on one side of the boat.

Figure 11-16. Minimum clearance for straight actuator harness.

The 180° actuator harness exits out toward the port side of the actuator, wrapping around the front of the actuator housing. This is useful for boats with limited splashwell side clearance. Be sure to check for adequate splashwell depth when using the 180° harness as it protrudes farther out from the front of the actuator.

Figure 11-17. Minimum clearance for 180° actuator harness.

NOMINAL LENGTH	PART NO.	STYLE	HARNESS COMPONENT LENGTH, FT (M)				
			BATTERY	IGNITION	CAN1	CAN2	CAN3
12'	CM30012	Straight	12 (3.6)	30 (9.1)	12 (3.6)	12 (3.6)	12 (3.6)
18'	CM30018	Straight	12 (3.6)	30 (9.1)	18 (5.5)	18 (5.5)	18 (5.5)
12'	CM31012	180°	12 (3.6)	30 (9.1)	12 (3.6)	12 (3.6)	12 (3.6)
18'	CM31018	180°	12 (3.6)	30 (9.1)	18 (5.5)	18 (5.5)	18 (5.5)

Table 11-3.

Figure 11-18. Nominal harness lengths.

11.2.6 Electric actuator for Bass boats

The EA1300 and EA1400 steering system is specifically developed for traditional Bass boats. Listed below are the performance differences from the standard EA1000 and EA1100 models. Vessels that are not Bass style boats are best served by the EA1000 and EA1100 steering actuators.

Features

- Very low free play at steering wheel — helps control chime walk.
- Steering response time and speed is much quicker with little effort.
- Symmetric helm feel when turning to port or starboard.
- Faster steering response with no load dependent variation.
- Higher precision control which means no steering creep.
- Higher position holding power against back driving load.
- Programmed helm resistance for high speed steering wheel stability.
- Number of turns default set to 3.5 no variation due to load.
- The electric steering system removes all hydraulic steering fluid from the boat — no bleeding.
- Simpler & Faster installation with fewer splash well perforations.

Figure 11-19. Electric bass boat (for reference only).

Electric vs. Hydraulic comparison

	(OPTIMUS EPS)	HYDRAULIC (SEASTAR PRO)
Steering system weight	Total 30 lbs (Helm 4 lbs, Cylinder 17 lbs, Harness 8 lbs, Display 1 lb)	Total 23 lbs (Helm 6.5 lbs, Cylinder 10 lbs, 16ft Hose 3 lbs, Oil 3.5 lbs)
Current draw	Low speed 4 amps average Medium speed 8 amps average High speed 12 amps average	Low speed 0 amps Medium speed 0 amps High speed 0 amps
Speed	3.5 turns LTL 30° a second: center to hard over 1 second	4.2 turns LTL varies with load: At load: center to hard over >2 seconds
Reaction time at load	100 milli seconds from movement at helm to movement at cylinder	300 milli seconds from movement at helm to movement at cylinder
Running dead band	1°	2°
Symmetric helm feel	Yes	No
Running backlash	0°	5°
Servicing	Annual greasing of support rod and brackets	Annual greasing of support rod and brackets Flush and change hydraulic fluid 2 years Annual bleeding

Table 11-4.

Order guide

The bass boat electric steering is compatible with the following engines. It is currently not rated to engines greater than 250 HP.

ENGINE MFR.	MODEL	BASS BOAT ACTUATOR
Yamaha	VF150 HP – VF250HP SHO	EA1300
Mercury	All 150 HP ProXS – 250 HP ProXS	EA1300
Suzuki	DF250 HP SSTL	EA1400

Table 11-5.

NOTE

Bass boats using any engine not on this listed in table 11-5, please contact your Dometic representative.

- In accordance with ABYC guidelines, the steering system should be installed utilizing the 4 inch color display (CANtrak) set in a position where the vessels operator can clearly see the screen. This is required in order to observe steering systems status and receive warnings.
- A CANTrak display is not required if any of the following compatible Garmin products are fitted, which are able to display the Optimus steering systems status (please refer to the Garmin website for a current list of compatible displays).
 - GPSMAP® 74xx / 7600
 - GPSMAP® 7x2 / 9x2 / 12x2 Plus
 - GPSMAP® 7x2 / 9x2 / 12x2
 - GPSMAP® 8700 Black Box
 - GPSMAP® 10x2 / 12x2 (Keyed)
 - Yamaha CL7
 - GPSMAP® 8400 / 8600

The www.OptimusBOM.com utility can be used to help select a system.

11.3 Optimus 360 — joystick control

11.3.1 Overview

The optional Optimus 360 joystick control system converts an operator's inputs into steering, shift, and throttle commands using this three-axis joystick controller. The joystick can rotate, move forward and back, and side to side. Combinations of these movements give the operator precise control of the boat's direction and speed. The Joystick is compatible with both electro/hydraulic and electric actuators.

11.3.2 Joystick fundamentals

The joystick is the primary user interface for the optional Optimus 360 joystick control system. It offers the ultimate control of the vessel for docking and maneuvering at slow speeds and is especially useful in confined or difficult circumstances. It is intuitive to use, as the boat follows the actions of the handle. This section of the manual gives a detailed description of all of its capabilities and how to get the maximum benefit from this powerful feature. The Optimus 360 joystick quick reference guide, provided with the system, gives summary and reminder information on its operation and should be kept on the vessel at all times.

NOTE

While the joystick is active the turning resistance of the steering wheel will increase to remind the user that the helm is disengaged.

Handle motion

The handle can be moved in any direction or rotated left or right. When released the spring-loaded joystick will return to center and put the engine in neutral at idle throttle.

Moving the handle away from center or rotating it will cause the engines to shift into the correct gear for the desired motion. Further handle motion in the same direction will apply throttle and provide more thrust in the chosen direction. The joystick is proportional and guided in each axis.

Boost button

Increases the power the engines can apply and may be turned on or off at any time. It can be very handy when handling the boat in wind or current. The system will remember the boost mode status so if it is left on, it will be on again next time the joystick is activated.

A blue LED on the Boost button will illuminate when in boost mode.

Take Command button

Activates the joystick and allows the joystick to take control of the vessel when both control head levers are in the neutral position.

Figure 11-20.

Figure 11-21. Optimus 360 electric actuator system diagram, single station, twin engine. (For reference only.)

11.4 SeaStation and SeaWays

11.4.1 SeaStation overview

SeaStation holds vessel position and heading via GPS.

When you are trying to locate that ideal spot over a reef or a wreck, SeaStation is ideal. Just hold your position and heading, drop your lines and see if you have success, if not, simply move to another location and engage SeaStation. No physical anchor required.

Dometic applied the same smart algorithms to SeaStation as with Optimus 360 joystick control to reduce unnecessary shifting and jockeying of the engines while providing superior position and heading functions for a large selection of engine platforms.

11.4.2 SeaStation modes

1. **Position mode** — hold position regardless of heading. Applications include; bait fishing and wreck/reef fishing. Finding the natural heading when in position hold could be the best option.
 2. **Heading mode** — regardless of position. Applications include; kite fishing/drift fishing. Easier setup/maximize fishing time.
 3. **Position and Heading mode** — stay in position and hold heading. Applications include; waiting for a bridge to open, a spot at the dock to become available and bait fishing near a structure.
-

11.4.3 SeaStation system specifications

Requires Optimus 360 joystick control system to be installed on vessel.

Accuracy (target)

± 3 Meters position hold, ± 10° Heading hold

Sensor and mounting information

Dimensions

without mount: 25.9 L x 12.9 W x 4.5 H (cm)
10.2 L x 5.1 W x 1.8 H (in)

with mount: 25.9 L x 12.9 W x 12.8 H (cm)
10.2 L x 5.1 W x 5.0 H (in)

Weight

without mount: 0.42 kg (0.9 lb)
with mount 0.51 kg (1.1 lb)

SeaStation kits

- EPSK1625 — SeaStation compass sensor core pack pole mount
 - EPSK1630 — SeaStation compass sensor core pack surface mount
-

11.4.4 SeaWays overview

SeaWays and SeaWays GO are integrated autopilot systems. SeaWays builds off of an Optimus EPS or Optimus 360 system by adding a GPS and heading sensor. The system uses position and heading data to steer the vessel automatically.

The SeaWays GPS sensor allows heading, track, and route modes whereas the SeaWays GO compass allows heading mode.

Once your Optimus EPS or Optimus 360 system is installed, adding SeaWays is simple:

1. Install the SeaWays or SeaWays GO sensor
2. Route network cable from sensor to Optimus network backbone
3. Apply sensor license provided with kit
4. SeaWays commissioning

11.4.5 SeaStation/SeaWays sensor positioning

Figure 11-22. Sensor mounting distance from nearby VHF antennas and other equipment.

NOTICE!

The sensor should be mounted as low as possible while still maintaining good sky visibility. This will reduce false movement due to the boat rocking back and forth.

The sensor is designed to withstand harsh environmental conditions.

ITEM	SPECIFICATION
Operating temperature	-30°C to +70°C (-22°F to +158°F)
Storage temperature	-40°C to +85°C (-40°F to +185°F)
Humidity	100% non-condensing

SeaWays GO heading sensor kit, part # EPSK1700 available.

12 Electronic Inboard and Sterndrive Steering

12.1 3000 series

12.1.1 Applications

Electronic Power Steering (EPS) system suitable for vessels from approximately 18 ft to 50 ft* with single or dual rudders.

Figure 12-1. System components. Single rudder system shown. * Subject to submission of survey form and rudder load calculation.

12.1.2 Environmental

- Operating temperature: -18 C to +77 C [ISO 25197]
- Storage temperature: -40 C to +85 C [ISO 25197]
- Corrosion resistance: 300 hours salt spray [ASTM B117]
- Water ingress protection: IPX7 [IEC 60529]
- Random vibration: $0.0284 \text{ g}^2/\text{Hz}$ [ABYC P-28]
- Resonant vibration: 4 G zeropeak, 20-2000 Hz [ABYC P-28]
- Mechanical shock: 50 G, 11 m-sec half-sine shape [ISO 25197]
- Ignition protection: SAEJ-1171
- Meets EN60945 electromagnetic compatibility requirement

12.1.3 Features

- Up to three helms stations
- Automatic battery management with sensing, warnings, and best battery selection
- On demand hydraulic steering pump minimizing power consumption
- No oil at the helm
- Rugged electronics for 12 or 24 VDC applications
- Color dash display showing rudder command and rudder position graphic
- Displays system health
- Display provides system setup interface
- Communicates faults and any special handling instructions to the operator
- No requirement for tie-bars depending on rudder loads (twin rudder systems)
- Simple software updating via USB port)
- Programmable number of turns lock to lock with speed
- Auto-adjusting steering end stops and resistance with speed
- Dual redundant position sensing on all moving components
- Helm offers both 3/4" taper or 1" straight shaft options
- Utilizes fault tolerant CAN network
- Full autopilot CANbus connectivity and integration. No additional pumps or sensors required
- Adjustable max rudder hard over angle with speed range 25° to 40° center to hard over
- Rudder toe in or out up to 5° with speed (twin rudder systems)
- Position proportional rudder gain for faster steering response near neutral rudder position
- RPM input: NMEA 2000, J1939 or analog pulse compatible
- Pump features an Integrated service/bypass valve allows a limp home mode
- Meets or exceeds ABYC, CE, ISO and SAE electrical and environmental requirements

12.1.4 Mounting configurations and system schematic

While using the table below be sure that your steering cylinder is at mid-stroke as shown in the figure right to ensure the cylinder operates correctly.

ATTACHMENT TO TILLER ARM, RECOMMENDED PER ABYC

Figure 12-2. Cylinder at mid-stroke.

MODEL EC5380 STEERING ANGLES							
50°		60°		70°		70°	
A	B	A	B	A	B	A	B

Table 12-1. *Torque shown is per cylinder. Twin rudder example: two cylinders at 60° steering angle will give a combined total of 17,774 in-lbs of torque.

Figure 12-4. Optimus EPS system diagram, single station, twin rudder.

12.2 4000 series

12.2.1 Applications

Electronic Power Steering (EPS) system suitable for vessels from approximately 40 ft to 60 ft* performance yachts with single or dual rudders.

Figure 12-5. System components. Twin rudder system shown. * Subject to submission of survey form and rudder load calculation.

12.2.2 Environmental

- Operating temperature: -18°C to +77°C [ISO 25197]
- Storage temperature: -40°C to +85°C [ISO 25197]
- Corrosion resistance: 300 hours salt spay [ASTM B117]
- Water ingress protection: IPX7 [IEC 60529]
- Random vibration: $0.0284 \text{ g}^2/\text{Hz}$ [ABYC P-28]
- Resonant vibration: 4 G zero-peak, 20-2000 Hz [ABYC P-28]
- Mechanical shock: 50 G, 11 m-sec half-sine shape [ISO 25197]
- Ignition protection: SAEJ-1171
- Meets EN60945 electro-magnetic compatibility requirement

12.2.3 Features

- Up to three helm stations
- Automatic battery management with sensing, warnings & best battery selection
- On demand hydraulic steering pump minimizing power consumption
- No oil at the helm
- Rugged electronics for 12 or 24 VDC applications
- Color dash display showing rudder command and rudder position graphic
- Displays system health
- Display provides system setup interface
- Communicates faults and any special handling instructions to the operator
- No requirement for tie-bars depending on rudder loads
- Simple software updating via USB port
- Programmable number of turns lock to lock with speed
- Auto-adjusting steering end stops and resistance with speed
- Dual redundant position sensing on all moving components
- Helm offers both 3/4" taper or 1" straight shaft options
- Utilizes fault tolerant CAN network
- Full autopilot CANbus connectivity and integration. No additional pumps or sensors required
- Adjustable max rudder hard over angle with speed range 25° to 40° Center to hard over
- Rudder toe in or out up to 5° with speed
- Position proportional rudder gain for faster steering response near neutral rudder position
- RPM input: NMEA 2000, J1939 or analog pulse compatible
- Pump features an integrated service/bypass valve allows a limp home mode
- Meets or exceeds ABYC, CE, ISO and SAE electrical and environmental requirements

12.2.4 Mounting configurations and system schematic

While using the table below be sure that your steering cylinder is at mid-stroke as shown in the figure right to ensure the cylinder operates correctly.

ATTACHMENT TO TILLER ARM, RECOMMENDED PER ABYC

Figure 12-7. Optimus EPS system diagram, single station, twin rudder.

12.3 5000 series

12.3.1 Applications

Electronic Power Steering (EPS) system suitable for vessels from 60 ft. to 100 ft. with single or dual rudders.

The incredible feel you get when you're behind the wheel of a boat equipped with Optimus EPS is the result of an innovative array of technology and engineering. Each component has been designed to complement the other, resulting in a seamless experience of steering control in virtually every situation on the water. The high level of engineering also extends to the reliability of the system, with quality materials, careful manufacturing and redundant systems, all to stand up to the rigors of life on the water.

As the captain of your vessel you know how important it is to have command of your yacht, Optimus EPS gives you the steering control, performance and comfort you expect. With Optimus EPS, you can take command of your yacht without having to arm-wrestle for control.

Figure 12-8. System components, dual station, single cylinder (twin rudders).

12.3.2 Environmental

- Operating temperature: -18°C to +77°C [ISO 25197]
- Storage temperature: -40°C to +85°C [ISO 25197]
- Corrosion resistance: 300 hours salt spray [ASTM B117]
- Water ingress protection: IPX7 [IEC 60529]
- Random vibration: 0.0284 g²/Hz [ABYC P-28]
- Resonant vibration: 4 G zero-peak, 20-2000 Hz [ABYC P-28]
- Mechanical shock: 50 G, 11 m-sec half-sine shape [ISO 25197]
- Ignition protection: SAEJ-1171
- Meets EN60945 electro-magnetic compatibility requirement

12.3.3 Features

- Up to three helm stations.
- Automatic battery management with sensing, warnings and best battery selection.
- On demand hydraulic steering pump minimizes power consumption.
- No oil at the helm.
- Rugged electronics for 24 VDC applications.
- Color dash display showing rudder command and rudder position graphic.
- Displays system health.
- Display provides system setup interface.
- Communicates faults and any special handling instructions to the operator.
- No requirement for tie-bars depending on rudder loads.
- Simple software updating via USB port.
- Programmable number of turns lock to lock with speed.
- Auto-adjusting steering end stops and resistance with speed.
- Dual redundant position sensing on all moving components.
- Helm offers both 3/4" taper or 1" straight shaft options.
- Utilizes fault tolerant CAN network.
- Full autopilot CANbus connectivity and integration. No additional pumps or sensors required.
- Adjustable max rudder hard over angle with speed range 25° to 40° center to hard over.
- Rudder toe in or out up to 5° with speed.
- Position proportional rudder gain for faster steering response near neutral rudder position.
- RPM input: NMEA 2000, J1939 or analog pulse compatible.
- Pump features an Integrated service/bypass valve allows a limp home mode.
- Meets or exceeds ABYC, ISO and SAE electrical and environmental requirements.

Figure 12-10 . Optimus EPS system diagram, dual station, twin cylinder (twin rudders).

12.4 5000 series — class certified

12.4.1 Applications

Electronic Power Steering (EPS) system suitable for vessels requiring class certification.

The class certified Optimus EPS 5000 series system meets RINA's and ABS' stringent "fit for purpose" safety standard for vessels less than 500 gt.

With type approval this class certified system is ready to install out of the box, simplifying vessel inspection and the final sign off process.

The incredible feel you get when you're behind the wheel of a boat equipped with Optimus EPS is the result of an innovative array of technology and engineering. Each component has been designed to complement the other, resulting in a seamless experience of steering control in virtually every situation on the water. The high level of engineering also extends to the reliability of the system, with quality materials, careful manufacturing and redundant systems, all to stand up to the rigors of life on the water.

As the captain of your vessel you know how important it is to have command of your yacht. Optimus EPS gives you the steering control, performance and comfort you expect. With Optimus EPS, you can take command of your yacht without having to arm-wrestle for control.

Figure 12-11. System components.

12.4.2 Environmental

- Operating temperature: -18°C to +77°C [ISO 25197]
- Storage temperature: -40°C to +85°C [ISO 25197]
- Corrosion resistance: 300 hours salt spray [ASTM B117]
- Water ingress protection: IPX7 [IEC 60529]
- Random vibration: 0.0284 g²/Hz [ABYC P-28]
- Resonant vibration: 4 G zero-peak, 20-2000 Hz [ABYC P-28]
- Mechanical shock: 50 G, 11 m-sec half-sine shape [ISO 25197]
- Ignition protection: SAEJ-1171
- Meets EN60945 electro-magnetic compatibility requirement
- Flammability tested: IEC 60332-1-2, IEC 60332-1-3, SAE J1128

12.4.3 Features

- Up to a maximum four helm/full follow up lever stations
 - 1 helm 3 full follow up levers
 - 2 helms 2 full follow up levers
 - 3 helms 1 full follow up lever
 - 3 helms only
- Automatic battery management with sensing, warnings and best battery selection
- On demand hydraulic steering pump minimizes power consumption
- Rugged electronics for 24 VDC applications
- Color dash display showing rudder command and rudder position graphic
- Displays system health and provides setup interface
- Communicates faults and any special handling instructions to the operator
- Simple software updating via USB port
- Programmable number of turns lock to lock with speed
- Auto-adjusting steering end stops and resistance with speed
- Dual redundant position sensing on all moving components
- Helm offers both 3/4" taper or 1" straight shaft options
- Utilizes fault tolerant CAN network
- Full autopilot CANbus connectivity and integration
 - No additional pumps or sensors required
- Adjustable with speed, maximum rudder angle to 70°
- Rudder toe in or out up to 5° auto adjusts with speed
- Position proportional rudder gain for faster steering response near neutral rudder position
- RPM input: NMEA 2000, J1939 or analog pulse compatible
- Pump features an integrated service/bypass valve for manual rudder centering
- Meets or exceeds ABYC, ISO requirements.

12.4.3 Mounting configurations and system schematic

Manual hydraulic steering system shown in schematic.

Kit number HA6501 contains:

- HH5271-3, Hydraulic helm
- 214457, Shut off valve kit inc. fittings
- 682684, Electrical switch
- 60065, Hydraulic tee
- 343088, Straight hydraulic fitting

Figure 12-13 . Optimus EPS system diagram, class system with port and starboard wing stations.

12.5 Optimus sterndrive series

12.5.1 Applications

- Most single and twin sterndrive engine boats under 40' — electronically and mechanically controlled
- Single and twin helm station boats
- Competition ski boats, cruisers, sport fishing yachts

Figure 12-14. System components.

12.5.2 Environmental

- Operating temperature: -18 C to +77 C [ISO 25197]
- Storage temperature: -40 C to +85 C [ISO 25197]
- Corrosion resistance: 300 hours salt spray [ASTM B117]
- Water ingress protection: IPX7 [IEC 60529]
- Random vibration: $0.0284 \text{ g}^2/\text{Hz}$ [ABYC P-28]
- Resonant vibration: 4 G zero-peak, 20-2000 Hz [ABYC P-28]
- Mechanical shock: 50 G, 11 m-sec half-sine shape [ISO 25197]
- Ignition protection: SAEJ-1171
- Meets EN60945 electro-magnetic compatibility requirement

12.5.3 Features

- Up to three helms stations
- Automatic battery management with sensing, warnings & best battery selection
- On demand hydraulic steering pump minimizing power consumption
- No oil at the helm
- Rugged electronics for 12 or 24 VDC applications
- Color dash display showing rudder command and rudder position graphic
- Displays system health
- Display provides system setup interface
- Communicates faults and any special handling instructions to the operator
- Simple software updating via USB port
- Programmable number of turns lock to lock with speed
- Auto-adjusting steering end stops and resistance with speed
- Dual redundant position sensing on all moving components
- Helm shaft: 3/4" taper
- Utilizes fault tolerant CAN network
- Full autopilot CANbus connectivity and integration. No additional pumps or sensors required
- Adjustable max rudder hard over angle with speed range 20° to 30° center to hard over
- Position proportional rudder gain for faster steering response near neutral rudder position
- RPM input: NMEA 2000, J1939 or analog pulse compatible
- Pump features an Integrated service/bypass valve allows a limp home mode
- Meets or exceeds ABYC, CE, ISO and SAE electrical and environmental requirements

Optimus 360 is available for twin engine sterndrives with Optimus steering when used with i7800 control system.

13 Trim Tabs

13.1 Overview

13.1.1 Trim tab principles of operation

Trim tabs are plates, installed in pairs, used to control the pitch and roll of a boat by directing water as it flows past the transom. They work by harnessing the hydrodynamic forces exerted by moving water, so the boat must be in motion for the tabs to have an effect.

Figure 14-1.

When a tab is lowered, the directed water flow will exert an upward force at the stern of the boat. If both tabs are lowered at the same time the upward force at the stern will force the bow down (pitch control). If only one tab is lowered it will force the bow down on the opposite side, causing the boat to roll (roll control). The combination of pitch and roll is the boat's attitude.

By adjusting the boat's attitude, the boat operator can get on plane faster, stay on plane at lower speeds, increase top speed, correct a small list, improve ride quality and visibility, reduce porpoising, and improve fuel economy.

13.1.2 Trim tab safe operation

- The trim tab actuators are powerful mechanical devices that can cause injury. Ensure no one is at risk of being injured before operating a tab when swimmers are in the water, or when operating the tabs on a trailer with people or children around.
- Only use the trim tab system as intended.
- Do not use tabs as a boarding step.
- When lifting the boat, do not place the lifting straps or forks on the tabs or actuators.
- Do not push or pull on the tabs or actuators when putting the boat on or off a trailer.
- Do not tie off or secure anything to the actuators.
- See a marine technician for repairs if the trim tabs, actuators, or controller are modified, damaged or not working correctly.
- The controller and actuators are not user serviceable; do not attempt to disassemble.
- The trim tab system is not a toy. Do not allow children to operate the system.

WARNING!

Exercise sound judgment when using trim tabs in challenging sea conditions. In some cases the safest action is to run with tabs fully retracted.

13.2 Tab and actuator installation

13.2.1 Planning

When deciding where to mount the tabs, there are several things to consider. Be sure you have considered all these items and perform a test fit before drilling any holes in the hull.

- The outboard edge of the tab should be inboard 1"–4" (25–100 mm) from the chine. The further outboard the tab, the more effective it is for controlling the side-to-side level of the boat.
- The edges of the tab should be at least 2" (51 mm) from a hull strake, if possible.
- To avoid interference with the engine, the tab must be at least 8" (205 mm) from the drive centerline.

WARNING!

Read all provided instructions and manuals thoroughly before beginning any installation.

Before drilling holes in the hull, always check that there is nothing in the hull that might be damaged, such as fuel or water tanks, electrical wiring, hydraulic steering hoses, etc.

Figure 14-2.

- There must be space behind the transom for the actuator harness to enter the boat in a dry location away from sources of heat.
- There are different tab configurations available and they will have different transom height (TH) requirements as shown in figure 14-3. The actual transom height will vary with the angle of the transom, so the maximum value for TH is shown.
- To ensure the tabs do not drag when retracted, they must be tilted up from the hull level. The longer the tab, the greater the height above the hull level at the trailing edge of the tab, as shown in figure 14-4.

Figure 14-3. Dimensions shown apply to standard 2.25" actuator only.

Figure 14-4.

13.3 Standard series

13.3.1 Technical description

The Trim Tab system consists of three primary components: the actuators, the sheet metal tabs, and the dial controller. The dial controller is unique in the industry with smart function buttons and an intuitive dial control that makes roll adjustment simple and obvious.

The system operates on 12VDC and supports two actuators and up to two dial controllers.

NOTICE!

Dometic trim tabs work as part of an integrated system, and cannot be combined with other makes of controls and/or actuators.

13.3.2 System components

The Trim Tab system consists of three primary components: the actuators, the sheet metal tabs, and the dial controller. The dial controller is unique in the industry with smart function buttons and an intuitive dial control that makes roll adjustment simple and obvious.

The system operates on 12VDC and supports two actuators and up to two dial controllers.

Item No.	Description

Item No	Description
1	☆ Favorite button
2	☉ Port tab position indicator
3	↔ Control dial
4	⤵ Bow down button
5	☉ Auto Brightness ambient light sensor
6	☉ System status indicator
7	☉ Starboard tab position indicator
8	🏠 Home button
9	⤴ Bow up button

Figure 14-6.

13.3.4 Basic features and operation

The dash-mounted Dial Controller is designed for intuitive operation. The function of each interface feature is described below.

System Status Indicator

Displays the status of the trim tab system.

Steady green	System is ready
Flashing cyan	The system has memorized the favorite position
Flashing blue	System is in manual LED brightness adjustment mode
Flashing yellow	Controller has a non-critical fault
Flashing red	Controller has a critical fault

Tab Position Indicator LEDs

Shows the position of port and starboard tabs. At full retraction a single LED is shown at the top. As the tabs are extended the LEDs will illuminate to show the tab position.

Bow Down

Lowers both tabs simultaneously, causing the bow to drop. Press and hold until the desired pitch is achieved.

Bow Up

Raises both tabs simultaneously, causing the bow to rise. Press and hold until the desired pitch is achieved.

Control Dial

Rolls the boat in the direction of rotation. Rotating the dial to starboard (clockwise) will cause the port tab to lower and the starboard tab to raise, causing the boat to roll to starboard. Turning the dial to port (counterclockwise) will have the opposite effect.

Use this control with caution: turn one click at a time and wait a moment to see how the boat reacts before making further adjustments. While this control can be used to correct a list due to uneven loading, best practice is to load your boat as evenly as possible, and to keep passenger movement at a minimum while underway at high speeds.

The relative positions of the tabs are maintained when using the Bow Down and Bow Up controls, so if you've used the roll control to correct for a list it will remain corrected as you alter the bow position.

Home

Press once to retract actuators to their fully retracted home position. Use this button when:

- you encounter difficult sea conditions and need to raise the bow,
- preparing to load the boat onto a trailer,
- preparing the boat for lifting.

Favorite

Press and hold the button for three seconds to save the current tab position. Press the button at any time to automatically return the tabs to this position.

Auto LED Brightness

The controller uses an ambient light sensor to automatically adjust the LED brightness. You can disable the automatic brightness control and adjust it manually if you prefer.

CAUTION! Varying sea conditions

If sea conditions have changed since you last set a favorite position, use caution when recalling it.

Preparing to trailer or lift the boat

- Press the Home button.
- ✓ The actuators will retract. When both tab position indicators show only one LED the tabs are fully retracted.
- You are ready to trailer or lift the boat.

NOTICE! Material damage

Trailing or lifting the boat with the trim tabs extended may cause irreparable damage to the tabs and actuators.

Automatic retraction

The trim tabs will automatically retract to the home position:

- when the ignition is switched on,
- when the ignition is switched off.

13.3.5 System configuration options

Manual LED brightness adjustment

By default, the LED brightness is controlled automatically with an ambient light sensor. If manual control is preferred, you can disable the automatic function (see section 8.6) and adjust it manually. To adjust manually:

- Press and hold both the Favorite and Home buttons together.
- ✓ The status LED and the starboard position indicator LEDs will flash blue to indicate you are in manual brightness mode. (If they do not flash, the auto-brightness function has not been disabled.)
- ✓ As you continue to hold the buttons the brightness of the LEDs will cycle through the five available levels.
- Release the buttons at the desired level.

Roll sensitivity adjustment

The roll sensitivity refers to how much the tabs move for a given movement of the control dial. The default sensitivity will work for most users, but you can increase or decrease the sensitivity if desired.

13.3.6 Technical data

Connection voltage	12V DC nominal (9/16V min/max per SAE J1455)
Current draw at load	5.0A at 300 lbf (1340 N) 9.0A at 600 lbf (2680 N)
Max. static load, tension	1000lbf (4.4 kN)
Max. static load, compression	1000lbf (4.4 kN)
Weight, actuator	2.25" stroke: 3.6 lb (1.6 kg) 4.25" stroke: 3.9 lb (1.8 kg)
Weight, controller	.5 lb (.24 kg)
Weight, tab	Varies with tab, approximately .036 lb/square inch (2.54 g/square cm) of tab, exclusive of brackets and hinges

Table 14-1.

13.3.8 Wiring diagrams

NOTICE! This system is designed for use with 12VDC only.

It is not compatible with 24VDC. Connecting to 24VDC will damage the electrical components.

Figure 14-7. Single station (standard series shown).

WARNING!

All parts of the electrical installation must comply with relevant ABYC or ISO standards. Harnesses and wiring must be rated for 105°C and comply with the latest revisions of SAE J1128 or ISO 6722.

Figure 14-8. Dual station (standard series shown).

13.4 Adaptive/Optimus adaptive series

13.4.1 Technical description

Your Adaptive Trim Tab System is the industry's first trim system with position feedback. This state-of-the-art system gives you immediate, precise, and repeatable control of vessel trim. With built-in intelligence, it can be integrated with Optimus Electronic Power Steering for complete vessel control. When integrated with Optimus, the system is called the Optimus Adaptive Trim Tab System.

The Adaptive Trim Tab System consists of three primary components: the adaptive actuators, the sheet metal tabs, and the adaptive dial controller. The adaptive dial controller is unique in the industry with smart function buttons and an intuitive dial control that makes roll adjustment simple and obvious.

The system operates on 12VDC, and uses a Controller Area Network (CAN) bus for communications. The controller can control up to four trim tab actuators and precisely synchronize their movement.

NOTICE!

Dometic trim tabs work as part of an integrated system, and cannot be combined with other makes of controls and/or actuators.

13.4.2 System components

Item No.	Description

5	☉ System status indicator
6	☉ Starboard tab position indicator
7	🏠 Home button
8	☉ Bow up button

Figure 14-10.

13.4.4 Basic features and operation

The dash-mounted Adaptive Dial Controller is designed for intuitive operation. The function of each interface feature is described below.

System Status Indicator

Displays the status of the trim tab system.

Steady green	System is ready
Steady magenta	Holeshot mode is activated, based on SOG
Steady lime green	Holeshot mode is activated, based on RPM
Flashing blue	System is in LED brightness adjustment mode
Flashing cyan	The system has memorized the favorite position
Steady blue	Tabs retracted automatically
Flashing yellow	Controller has a non-critical fault
Flashing red	Controller has a critical fault

Tab Position Indicator LEDs

Shows the position of port and starboard tabs. At full retraction a single LED is shown at the top. As the tabs are extended the LEDs will illuminate to show the tab position.

Bow Down

Lowers both tabs simultaneously, causing the bow to drop. Press and release to move both tabs a preset increment, or press and hold until the desired pitch is achieved. To enable fine control, the actuator speed is reduced for the first second the button is held, after which the actuators move at full speed for larger adjustments.

Bow Up

Raises both tabs simultaneously, causing the bow to rise. Press and release to move both tabs a preset increment, or press and hold until the desired pitch is achieved. To enable fine control, the actuator speed is reduced for the first second the button is held, after which the actuators move at full speed for larger adjustments.

Control Dial

Rolls the boat in the direction of rotation. Rotating the dial to starboard (clockwise) will cause the port tab to lower and the starboard tab to raise, causing the boat to roll to starboard. Turning the dial to port (counterclockwise) will have the opposite effect.

Use this control with caution: turn one click at a time and wait a moment to see how the boat reacts before making further adjustments. While this control can be used to correct a list due to uneven loading, best practice is to load your boat as evenly as possible, and to keep passenger movement at a minimum while underway at high speeds.

The relative positions of the tabs are maintained when using the Bow Down and Bow Up controls, so if you've used the roll control to correct for a list it will remain corrected as you alter the bow position.

Home

Press once to retract actuators to their fully retracted home position. Use this button when:

- you encounter difficult sea conditions and need to raise the bow,
- preparing to load the boat onto a trailer,
- preparing the boat for lifting.

The home button will immediately override any automatic operation of the trim tab actuators and return them to home position. When the tabs reach the home position the trim tab position indicator LED will blink three times.

Favorite

The Favorite button has two functions:

1. Set and recall a Favorite trim tab position.
2. Toggle Holeshoot mode on or off.

You can switch between these functions by pressing and holding the Favorite and Bow Up buttons together for three seconds. The system status indicator will briefly flash magenta to show the Holeshoot function is enabled, or green to show the Favorite function is enabled.

LED Brightness

The controller provides manual adjustment of the LED brightness.

Preparing to trailer or lift the boat

- Press the Home button.
- ✓ The actuators will retract. When both tab position indicators show only one LED the tabs are fully retracted.
- You are ready to trailer or lift the boat.

NOTICE! Material damage

Trailing or lifting the boat with the trim tabs extended may cause irreparable damage to the tabs and actuators.

13.4.5 Advanced features and operation

Setting and recalling a favorite position

With this function you can memorize a trim tab position and return to it at any time with a single press of a button.

To set a favorite position:

- Press the Favorite button (see figure 14-10) for five seconds.
- ✓ The system status indicator will flash cyan three times to confirm the position has been saved.

To recall a favorite position:

- Press the Favorite button.
- ✓ The tabs will adjust to the saved favorite position.

CAUTION! Varying sea conditions

If sea conditions have changed since you last set a favorite position, use caution when recalling it.

Adaptive Cruising Favorite set-point

As you operate your boat and adjust the trim settings the system stores the latest stable setting as an Adaptive Cruising Favorite set-point. A stable setting is one that is maintained for twenty seconds while Holeshoot mode is activated and the engine RPM or speed over ground meets a preset minimum. The system status indicator will flash cyan when the system has memorized a favorite position.

The Adaptive Cruising Favorite set-point is used by the Holeshoot mode, and is only available in systems in which Holeshoot mode is enabled by the builder/dealer.

Holeshoot mode

NOTE: Holeshoot mode prerequisites

- Holeshoot mode requires an engine gear signal and either an engine RPM or GPS speed-over-ground source.
- If your boat is equipped with Optimus Electronic Power Steering (EPS), or has an NMEA2000 network with an engine gateway, you will likely have the engine gear and RPM signal, and you may have an SOG source.

Holeshot mode is a semi-automatic mode designed to get your boat up on plane quickly, with a minimum of operator involvement. It allows you to keep your focus on the water ahead of you and the safe operation of your boat.

When activated, Holeshot mode simplifies getting on plane. It will automatically deploy the trim tabs when it detects a Holeshot (a minimum engine RPM is reached), then retract them to the Adaptive Cruising Favorite set-point as speed increases and the boat gets on plane.

To perform a Holeshot:

- ▶ Trim your outboard or sterndrive as you normally would for launch.
- ▶ Press the Favorite button (see figure 14-10).
- ✓ The system status indicator (see figure 14-10) will light up magenta or lime green. Magenta indicates that SOG is used to control deployment, while lime green indicates RPM is used.
- ▶ Increase throttle to your normal launch RPM.
- ✓ The Adaptive Trim Tab System manages tab deployment to get you up on plane quickly.
- ▶ Manually adjust engine trim and trim tabs as necessary for the conditions.

WARNING!

If sea conditions have changed since the last Adaptive Cruising Favorite set-point was stored, the trim position may be unsuitable, and could potentially put the boat in a poor attitude for the conditions. Trim the tabs manually in this case. Always use your best judgment before activating Holeshot mode.

NOTE: Planing time limit

When RPM is used to control the tab deployment (i.e. no SOG source), there is a time limit between activation and when you must initiate the holeshot (by throttling up). The default limit is 15 seconds.

NOTE: Holeshot performance

The performance of holeshot mode is sensitive to tab size, system tuning, and throttle application. If holeshot performance is unsatisfactory, contact your dealer for assistance.

NOTE

If you cannot activate Holeshot mode:

- Your boat may not have an engine RPM or GPS speed-over-ground source.
- Holeshot mode may be disabled.
- Check that at least one engine is running, no engines are in reverse gear, and that an Optimus joystick (if equipped) is not active.

NOTE: Holeshot automatic deactivation

If Holeshot mode is activated, it will automatically deactivate when:

- all engines are switched off
- any engine is shifted into reverse
- an Optimus joystick is activated

Holeshot mode will automatically reactivate when at least one engine is running, no engines are in reverse, and the joystick is not active.

Automatic retraction

The trim tabs will automatically retract:

- when the ignition is switched off*,
- when the engine(s) are placed in reverse gear**,
- when Optimus joystick control or SeaStation are activated (when boat is so equipped).

Homing

When the trim tab controller is powered on, the system will go through a homing cycle. The trim tabs will retract at slow speed until the end of travel is detected.

This ensures the accuracy of the position feedback.

During the homing cycle the tab position indicator LEDs will light up sequentially from bottom to top. When the home position is detected the top LED will blink three times.

* Battery switches must remain on.

** Requires a gear position signal. Standard on Optimus systems.

13.4.6 Technical data

	STANDARD ACTUATOR	HIGH-SPEED ACTUATOR

13.4.8 Wiring diagram

Figure 14-11. Dual station (adaptive series shown).

14 Electronic Controls

14.1 i7X00 series

14.1.1 System description

SeaStar i7X00 is an electromechanical system that replaces a traditional cable-operated engine remote control with an electronic control. Shift and throttle settings are sent over a serial data network to electro-mechanical actuators, where they are converted to cable motion. The elimination of mechanical cables to the control head simplifies multi-station installations, especially when a station is installed onto a flybridge or tower that is removed for shipping. The system supports the installation of up to three control heads.

The i7X00 system consists of the major components listed below.

CAN Network

CAN (controller area network) is a serial network protocol that is widely used in marine and automotive control systems. Each device (node) on the network can send and receive data using specially formatted messages. The ability to reliably communicate data between devices is what enables the functionality of i7X00.

i7X00 implements the high-speed CAN protocol using DeviceNet harnesses and connectors. We refer to the network as CAN2 in the documentation to distinguish it from other CAN protocols used on SeaStar products.

Control Head

The control head looks much like a conventional mechanical remote control, but it is an electromechanical device that converts lever position into digital messages that are sent over CAN2 to the shift and throttle actuators. The control head features adjustable lever feel, status lights, a synchronous trim switch (optional), and control buttons for added functionality.

Shift and Throttle Actuator

The actuators are electromechanical devices that receive digital commands on the CAN2 network and convert these commands into movement of a mechanical cable for gear selection and throttle control.

14.1.2 System overview diagram

1. Control Head
2. Throttle/Shift Actuator
3. CAN Network Bus

Figure 15-1. System overview.

14.1.3 First time use

WARNING!

Be very cautious when first engaging the gears to establish that forward is truly forward and reverse is truly reverse. A quick in-and-out of gear test is recommended. Ensure that the boat is clear of all obstacles forward and aft before conducting this test.

Before starting the engines for the first time, familiarize yourself with the shift and throttle controls and the features described in section 14.1.4. With the engines and control system off, move the control levers over the full range until you are familiar with the feel. The lever feel can be adjusted if desired. See section 14.1.7.

14.1.4 Control head operation

The control head is the user interface for shift and throttle control. There are two types of control head used with the i7X00 system: single lever (STM), used on single-engine applications, and dual lever (DTM), used on multi-engine applications. Both types of control head are top-mounted; a side-mount single lever control head is not available for the i7X00 system.

The i7X00 Quick Reference Guide provides a summary of the control head operation and should be kept on the vessel at all times.

Figure 15-2. i7X00 dual lever control head.

14.1.5 Identification — Dual lever (DTM)

The following figures identify the components and features of the control head. This information is also found on your i7X00 Quick Reference Guide. Please take some time to familiarize yourself with the controls and features before going out on the water for the first time.

Figure 15-3.

Used to activate a control head.

To take command with a control head:

- Put control levers in neutral and press **Take Command**.
- The adjacent lamp signals the transfer status as follows:
 - Steady blue – station is active and in control of shift and throttle. ●
 - Flashing blue – station transfer from one station to another is underway. You have five seconds to match the control lever positions with those of the active station to complete the transfer. ⚙️
 - Fast flashing blue – A warning fault is active.
 - Lamp off – station is inactive

NOTE

If the lamp does not come on when you press **Take Command**, Station Protection may be enabled. See section 14.1.8.

Figure 15-4.

NEUTRAL THROTTLE WARM-UP (NTW):

NTW allows you to control engine throttle without gear engagement, so that you can warm up your engines at a higher RPM. A slow flashing green neutral indicator lamp tells you that NTW is engaged for the corresponding engine. ⚙️

To engage Neutral Throttle Warm-up:

- Move the engine's control lever to the Neutral position. The neutral indicator lamp will light steady green. ●
- Press the corresponding **N** button. The neutral indicator lamp will flash green to indicate that NTW is engaged. ⚙️
- You can now increase throttle and the engine will stay in neutral.

To disengage Neutral Throttle Warm-up:

- Return the engine's lever to the Neutral position.
- Press the corresponding **N** button. The lamp will light steady green. The engine and transmission will now respond normally to lever commands. ●

TROLLING MODE (TM):

- Provides greater throttle sensitivity: moving an engine's control lever to full forward will only produce a percentage of wide open throttle. The default TM throttle limit is 50% in forward gear, 100% in reverse gear.
- Very slow flashing (one second on, two seconds off) green neutral indicator lamps indicate that trolling mode is engaged. ⚙️

TO ENGAGE Trolling Mode:

- Move one or both control levers to the forward idle or reverse idle positions. The other lever must be in the same position or in neutral.
- Press either **N** button. Both lamps will flash green slowly to indicate that TM is engaged. ⚙️

TO DISENGAGE Trolling Mode:

- Move both control levers to forward idle, reverse idle, or neutral position.
- Press either **N** button. The flashing green lamps will go out to indicate that TM is disengaged. ○

POWER TRAIN SYNC (PTS) BUTTON AND LAMP:

PTS synchronizes engines and transmissions so that the port lever controls shift and throttle of all engines.

The lamp adjacent to the **Sync** button indicates PTS status. A steady blue lamp means PTS is engaged. ●

To engage Power Train Sync:

- Press **Sync**. The blue lamp will flash. ☀
- Match control lever positions within 5% of each other. The lamp will go steady blue to indicate that power trains are in sync. ●

To disengage Power Train Sync:

- Press **Sync**. The blue lamp will flash. ☀
- Match control lever positions within 5% of each other. The blue lamp will go off – PTS is now disengaged. ○

ADJUSTABLE LEVER FEEL

Turn screw in to tighten the lever feel, and turn screw out to loosen the lever feel.

Figure 15-5.

14.1.6 Identification — Single lever (STM)

Figure 15-6.

ENGINE TRIM CONTROL (OPTIONAL)

LEVER POSITION INDICATOR

INDICATOR DIMMING FEATURE:

When the control head is active, pressing **SEL** repeatedly will cycle through the available indicator brightness levels.

NEUTRAL INDICATOR LAMP:

This lamp has four states:

Steady green – engine is in neutral ●

Slow flashing green (0.5s on, 0.5s off) – Neutral Throttle Warm-up is engaged ⚙

Very slow flashing green (1s on, 2s off) – Trolling Mode is engaged ⚙

Fast flashing green, with fast flashing amber – A danger fault is active ⚙

SEL BUTTON:

Used to activate a control head.

To activate a control head:

- Put control lever in neutral and press **SEL**.

- The amber lamp signals the transfer status as follows:

Steady amber – station is active and in control of shift and throttle. ●

Slow flashing amber – station transfer from one station to another is underway. You have five seconds to match the control lever positions with those of the active station to complete the transfer. ⚙

Fast flashing amber – A warning fault is active.

Lamp off – station is inactive

NOTE

If the lamp does not come on when you press **SEL**, Station Protection may be enabled. See section 14.1.8.

Figure 15-7.

NEUTRAL THROTTLE WARM-UP (NTW):

NTW allows you to control engine throttle without gear engagement, so that you can warm up your engine at a higher RPM. A slow flashing green neutral indicator lamp tells you that NTW is engaged. ⚙️

To engage Neutral Throttle Warm-up:

- Move the control lever to the Neutral position. The neutral indicator lamp will light steady green. ●
- Press the **N** button. The neutral indicator lamp will flash green to indicate that NTW is engaged. ⚙️
- You can now increase throttle and the engine will stay in neutral.

To disengage Neutral Throttle Warm-up:

- Return the lever to the Neutral position.
- Press the **N** button. The lamp will light steady green. The engine and transmission will now respond normally to lever commands. ●

TROLLING MODE (TM):

- Provides greater throttle sensitivity: moving the control lever to full forward will only produce a percentage of wide open throttle. The default TM throttle limit is 50% in forward gear, 100% in reverse gear.
- A very slow flashing (one second on, two seconds off) green neutral indicator lamp indicates that trolling mode is engaged. ⚙️

TO ENGAGE Trolling Mode:

- Move the control lever to the forward idle or reverse idle positions.
- Press the **N** button. The lamp will flash green slowly to indicate that TM is engaged. ⚙️

TO DISENGAGE Trolling Mode:

- Move the control lever to forward idle or reverse idle position.
- Press the **N** button. The flashing green lamp will go out to indicate that TM is disengaged. ○

Figure 15-8.

14.1.7 Lever adjustment

The control lever feel can be adjusted by means of adjusting screws on the forward face of the control head.

- The friction drag on the lever is adjusted with the throttle friction adjuster screw (see figure 15-5 or figure 15-8). Turn the screw clockwise to increase the friction on the lever, counter-clockwise to reduce the friction.
- The force required to move in and out of the shift detents is adjusted with the Shift Detent adjuster screw. The detents are meant to prevent accidental gear engagement, so bear that in mind as you make adjustments. Clockwise increases force, counter-clockwise decreases.

Figure 15-9. Control head lever positions.

14.1.8 Station selection and station select protection

The way in which you activate a control station depends on whether the Station Select Protection (SSP) feature has been enabled. SSP prevents unauthorized or inadvertent activation of a control head and can only be enabled by an authorized dealer. By default, SSP is not enabled.

SSP not enabled (default)

On single station boats the control head is always active when the ignition is on, but on multi-station boats the control head must be activated. This can be done in two ways:

- the Smart Select feature will automatically activate a control head if the levers are moved out of the neutral position. This feature only works when the ignition is first turned on.
- the control head can be manually activated using the **SEL** button (STM control heads) or the **Take Command** button (DTM control heads) with the lever(s) in neutral.

An active control head is indicated by an LED lamp: solid amber (STM) or solid blue (DTM).

SSP Enabled

When SSP is enabled there is no automatic activation of control heads. A specific sequence of button presses is always required to activate a control head.

Dual lever control head:

1. Press **Take Command** twice.
2. Press **N** once.
3. Press **Take Command** again.
4. If the blue light turns on solid the station is active.
5. If the blue light flashes, match the lever position with the originally active station and the blue light will go solid to indicate that the transfer has been completed.

Single lever control head:

1. Press **SEL** twice.
2. Press **N** once.
3. Press **SEL** again.
4. If the amber light turns on solid the station is active.
5. If the amber light flashes, match the lever position with the originally active station and the amber light will go solid to indicate that the transfer has been completed.

WARNING!

Until the blue (DTM) or amber (STM) light is on solid, the original active station retains control of the shift and throttle.

15.5 2-Year limited warranty

The SeaStar Solutions® warrants its products to be free from defects in materials and workmanship for a period of two years from the date of original retail purchase, provided, however, the warranty period for SeaStar Solutions® products used commercially or in any rental or other income producing activity shall be as follows:

- Ninety days from the date of original purchase for mechanical and electrical products; and
- One year from the date of original purchase for hydraulic products.

We will provide replacement product without charge for any SeaStar Solutions® product covered by this warranty, which is returned (freight prepaid) within the warranty period to the dealer from whom such products were purchased, or to us at the appropriate address. In any such case, SeaStar Solutions® products found to be defective and covered by this warranty will be replaced or repaired at SeaStar Solutions® option, and returned to the customer.

SeaStar Solutions® sole responsibility under this warranty is limited to the repair or replacement of product which is, in SeaStar Solutions® opinion, defective. SeaStar Solutions® is not responsible for charges connected with the removal of such product or re-installation of replacement or repaired parts.

We will have no obligations under this warranty for any product which:

- has been improperly installed;
- has been used in an installation other than as recommended in our installation or operation instructions or specifications;
- has failed or has been damaged due to an accident or abnormal operation including racing, misuse or alterations outside our factory;
- has been repaired or modified by entities other than SeaStar Solutions®;
- has been used on an engine/boat combination where the engine horsepower exceeds the rating established by the boat manufacturer;
- has been used with other product(s) which, in SeaStar Solutions® opinion, are incompatible with the SeaStar Solutions® product.

THE EXPRESS WARRANTY SET FORTH ABOVE IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. SEASTAR SOLUTIONS® EMPLOYEES OR REPRESENTATIVES' ORAL OR OTHER WRITTEN STATEMENTS DO NOT CONSTITUTE WARRANTIES, SHALL NOT BE RELIED UPON BY CUSTOMER, AND ARE NOT A PART OF THE WARRANTY STATED HEREIN. THIS WARRANTY WILL BE THE CUSTOMER'S EXCLUSIVE REMEDY. IN NO EVENT WILL SEASTAR SOLUTIONS® BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR BREACH OF ANY EXPRESS OR IMPLIED WARRANTY RELATING TO THE PRODUCTS. Some states do not allow limitations on an implied warranty, or the exclusion of incidental or consequential damages, so the above exclusions may not apply to you. You may also have other rights which vary from state to state.

If any part of this Limited Warranty is determined to be void or illegal, the remainder shall remain in full force and effect.

SeaStar Solutions® products returned under this warranty must be tagged with the customer's name, street address, and phone number to ensure proper handling, and returned freight prepaid to the selling dealer or to the appropriate SeaStar Solutions® manufacturing facility.

Mobile living made easy.
