

## T005 Strap Bracket

### Installation instructions

Package contents: Strap Bracket, double sided Velcro strap, adhesive Velcro patch, two foam strips, nut, bolt, 2 washers.

- Stick the adhesive Velcro patch horizontally to the front of your mast at the intended height for the bracket
- Fit the cradle (supplied with your Micro Compass) to the bracket using the M4 nuts and bolts supplied
- Fit the foam pads to the bracket, to provide a cushion where the bracket will be in contact with your mast
- Attach one end of the Velcro strap to the patch at the front of the mast
- Offer the bracket up to the rear of the mast, and thread the Velcro Strap through the slots in the side of the bracket.
- Pull tight, and fasten
- Cut off excess Velcro, but leave AT LEAST 8mm (3") overlap
- Test for rotational stability. If you require more stability, then:
  1. Check the position of the foam pads, moving outwards if needed
  2. Tighten the strap hard, applying plenty of tension
  3. An option is to fit the bolt into the centre hole to prevent rotation
  4. Alternatively, buy a Raymarine slug (T932) & fit into the mast track

### WARNINGS

- Compass is accurate only when mounted within 20° of the vertical. Do not lean compass to port or starboard.
- Do not mount within 2' or 0.6 m of magnetic objects. Note that a conventional compass is a magnetic object.
- !! Check your installation before you sail !! Raymarine does not carry responsibility for units lost at sea due to insecure fixing.
